Summary of Changes

Revision 2011-002 contains the following changes and additions:

- Added Fixed Income Definition, Spot Definition, and Contract for Difference sections under New Order Single Basic.
- Updated tag 167 (SecurityType) definitions in Appendix B.
- Corrected format of tables that improperly spanned multiple pages.

Introduction

This manual describes the way Interactive Brokers LLC (“IB”) implements industry standard Financial Information Exchange (FIX™) Protocol[†] as specific for IB clients and vendors who connect to IB using a Computer to Computer Interface (“CTCI”). IB currently supports FIX versions 4.1 or 4.2. In addition, IB uses some tags specific to FIX version 4.3 and 4.4 as well as custom IB tags. This manual documents messages supported by IB and their particular implementation. For a complete guide to the FIX standard please refer to the official FIX home page at the following URL: <http://www.fixprotocol.org>

This document assumes the default definition of the FIX standard unless otherwise noted. Only message types and fields (tags and values) which are supported by IB FIX engine are included in this manual. Not supported fields are not guaranteed to be included in FIX messages sent by IB. If an unsupported field is received by IB, it is not validated for processing purposes. FIX messages with unknown tags are not rejected as long as they include all necessary supported tags. Messages of types that are not supported are rejected.

[†] “FIX Protocol”, “Financial Information Exchange”, “FIXML” and “FIX” are trademarks or service marks of FIX Protocol Limited. The marks “FIX Protocol”, “FIXML” and “FIX” are registered trademarks in the European Community.

Session Management

Telecommunication Link Types

IB requires that FIX CTCL customers/vendors establish a FIX session over TCP using one of the following telecommunication link types:

- Extranet Provider. Most IB data centers are enabled for one or more of the following extranet providers: Radianz, TNS, and Savvis. The client must be connected to chosen extranet provider in order to use this connectivity option. Extranet providers guarantee a secure dedicated connection between client and IB data centers.
- Dedicated Line. Client can opt for ordering a dedicated network connection into an IB data center via one of the telecommunications providers supported by IB. For example, Greenwich, CT data center currently supports AT&T, Verizon, and Lightpath. Please contact IB Client Integration Group for the list of available telecommunications providers in other data centers.
- Virtual Private Network (VPN). This type allows for connection over public Internet using secure tunnel. VPN allows for a private peer-to-peer telecommunication connection without a need for a dedicated leased line or an extranet provider.
- IB Gateway Client. Connection through public Internet using IB Gateway Client application (or IB Trader Workstation). The client must run the IB provided client application locally and use it as a gateway to IB system.

In addition IB supports direct unprotected FIX connectivity over public Internet for Quality Assurance (“QA”) and User Acceptance Testing (“UAT”) only. IB provides dedicated IP and port in its QA/UAT environment for customer testing and certification.

Authentication

For extranet connections, dedicated line connections and VPN clients the authentication is accomplished by cross checking the source IP of the client, SenderCompID (FIX tag 49) and dedicated TCP port assigned to the client. No additional authentication is required due to the private nature of telecommunication link.

For IB Gateway Client Connections the client must enter a valid username and password provided by IB. The IB Gateway Client then establishes a secure SSL tunnel to IB system. The user’s FIX engine then connects to the Gateway Client using valid SenderCompID.

By default all customers must use “IB” as their FIX TargetCompID and their IB username as FIX SenderCompID. IB Client Integration Group must be contacted if alternative Sender and Target CompID values are preferred.

Sequence Number Management

A FIX session consists of a series of messages with a continuous set of sequence numbers. Resetting the inbound and outbound sequence numbers back to 1 establishes a new FIX session. A client can establish a new FIX session by setting tag 141 (ResetSeqNumFlag) to “Y” in the login message. IB does not initiate sequence number resets.

Inbound and outbound sequence numbers should be tracked independently. This is to identify gaps in message delivery. After authentication, the client and host must synchronize their message sequence numbers before any new messages can be sent. In the event that the

received sequence number is higher than the expected sequence number, the client should respond with a Resend Request specifying the range of missing sequence numbers in tag 7 (BeginSeqNo) and tag 16 (EndSeqNo) tags. IB supports the value of 0 in tag 16 which would indicate the highest available sequence number.

If the sequence number received is less than the expected sequence number and tag 43 (PosDupFlag) is not set to "Y", it will not be possible to establish a FIX session until the sent sequence number is equal to or greater than the one expected. A reject message will be sent with the expected sequence number sent in the text tag.

By default, IB does not reset the sequence numbers each night. However it is possible to configure your account to do so. Sequence numbers would then be reset to 1 (inbound and outbound) each night during system restart. Weekly sequence number resets are also supported.

Session Protocol

Message Format and Field Delimiter

IB currently supports the standard “Tag=Value” FIX syntax. The general format of a FIX message applies. Messages consist of a series of “Tag=Value” fields separated by a field delimiter. The delimiter is ASCII 1 (SOH) symbol. Examples in this manual will represent that delimiter with a space. All messages begin with a standard header and are terminated with a standard trailer.

Message Recovery

Message gaps may occur during login or in the middle of a FIX session that require message recovery. When this occurs, a Resend Request message can be sent requesting a range of missing messages. The re-sender will then respond with a Sequence Reset message that has tag 123 (GapFillFlag) set to “Y” and tag 43 (PossDupFlag) set to “Y”. Tag 36 (NewSeqNo) will be set to the sequence number of the message to be redelivered next. Following this, the missing Application level messages will be resent. Most Administrative messages will not be resent. The administrative messages that will not be resent are: Logon, Logout, ResendRequest, Heartbeat, TestRequest and SeqReset-Reset and SeqReset-GapFill. This process of Sequence Reset / message delivery will continue until all of the relevant messages within the specified range have been delivered.

Standard Message Header

Every administrative or application message must begin with a standard header. IB Supports the fields listed below.

Tag #	Field Name	Req'd	Comments
8	BeginString	Y	FIX.4.1, FIX.4.2 or FIX.4.3 are supported in this tag *If FIX 4.3 is specified, see Appendix A
9	Body Length	Y	Message length, in bytes, forward to checksum field
35	MsgType	Y	IB Supports the following values: 0 = Heartbeat 1 = Test Request 2 = Resend Request 3 = Reject 4 = Sequence Reset 5 = Logout 8 = Execution Report 9 = Order Cancel Reject A = Logon D = Order Single F = Order Cancel Request G = Order Cancel/ Replace Req H = Order Status Request AB = New Order Multileg (FIX 4.3) AC = Multileg Cancel Replace Request
49	SenderCompID	Y	For IB Cleared sessions, this is the username. For non-cleared sessions this is agreed upon with IB FIX Integration Group
50	SenderSubID	N	Optional
56	TargetCompID	Y	Default is “IB”, if required the value can be determined by the client, please notify Client Integration Group.

Tag #	Field Name	Req'd	Comments
57	TargetSubID	N	Per Standard
34	MsgSeqNum	Y	Per Standard. Please note that IB currently supports sequence numbers up to 999999. Sequence numbers must be reset once they reach that value. IB recommends daily or weekly sequence number resets to avoid this issue.
43	PossDupFlag	N	Per Standard
97	PossResend	N	Per Standard
52	SendingTime	Y	Per Standard
122	OrigSendingTime	N	Per Standard

Standard Message Trailer

Each message, administrative or application, is terminated by a standard trailer. IB only requires tag 10 (Checksum).

Tag #	Field Name	Req'd	Comments
10	Checksum	Y	3 byte simple checksum. Always represented as 3 ASCII characters.

Administrative Messages

Administrative messages are used for session management and address the utility needs of the protocol. IB uses the following Administrative messages:

- Logon
- Heartbeat
- Test Request
- Resend Request
- Reject (Session Level)
- Sequence Reset (Gap Fill)
- Logout

This section describes the administrative messages that IB uses and provides the layout for each message.

Logon

The logon message is used to establish a FIX connection with IB. It therefore must be the first message sent.

Tag #	Field	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = A
98	EncryptMethod	Y	Valid Value = 0 (none, encryption is currently not supported)
108	HeartBtInt	Y	A heartbeat interval of 30 seconds is suggested. The initiator may set it to any value, but the acceptor (IB) may override this interval when necessary. That means that the initiator has to be prepared to receive and respond to Test Request and Heartbeat messages in any case.
141	ResetSeqNumFlag	N	This field is required when a new session is to be opened.
	<i>Standard Trailer</i>	Y	

Heartbeat

If either end of the connection has not sent any data in the amount of time specified in the heartbeat interval, a heartbeat message will be sent. If a heartbeat message is not received within the specified heartbeat interval, the connection should be considered lost. IB recommends a heartbeat interval of 30 seconds.

Tag #	Field	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = 0
112	TestReqID	N	Required when the heartbeat is the result of a Test Request message.
	<i>Standard Trailer</i>	Y	

Test Request

The test request message forces a heartbeat from the opposing application. If either end of the connection has not received any data within the specified heartbeat interval a test request message will be sent. IB suggests the use of a timestamp in the TestReqID field as it is useful to verify that the Heartbeat is the result of the Test Request and not as the result of a regular timeout.

Tag #	Field Name	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = 1
112	TestReqID	Y	A timestamp string is suggested for TestReqID
	<i>Standard Trailer</i>	Y	

Resend Request

The Resend Request initiates the retransmission of messages. It can be used to request a single message, a range of messages, or all messages which follow a particular message.

Tag #	Field Name	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = 2
7	BeginSeqNo	Y	
16	EndSeqNo	Y	0 = infinity is supported. Or upper value must be specified
	<i>Standard Trailer</i>	Y	

Sequence Reset and Gap Fill

The sequence reset message is used by the sending application to reset the incoming sequence number on the opposing side.

Tag #	Field Name	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = 4
123	GapFillFlag	N	Indicates that the Sequence Reset message is replacing administrative or application messages which will not be resent. Y = Gap Fill message, MsgSeqNum field valid N = Sequence Reset, ignore MsgSeqNum
36	NewSeqNo	Y	
	<i>Standard Trailer</i>	Y	

Session Level Reject

The reject message is issued when a message is received but cannot be properly processed due to a session-level rule violation

Tag #	Field Name	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = 3
45	RefSeqNo	Y	MsgSeqNum of rejected message
58	Text	N	Possible Reject Text Message Reasons: Session not open Invalid message type = Message must contain field # Invalid value in field # Sequence number lower than expected # Sequence number higher than expected # Session already open Attempt to decrease receive sequence number #
	<i>Standard Trailer</i>	Y	

Logout

The logout message initiates or confirms the termination of a FIX session. Disconnection without the exchange of logout messages should be interpreted as an abnormal condition.

Tag #	Field Name	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = 5
58	Text	N	
	<i>Standard Trailer</i>	Y	

Application Messages

IB supports the following Application Messages:

- New Order Single
- New Order Multileg (FIX 4.3)
- Execution Reports
- Order Cancel/Replace Request
- Order Cancel Request
- Order Cancel Reject
- Order Status Request
- Bulletins

In addition to the majority of the messages that comply to the FIX 4.2 standard, IB supports the New Order – Multileg function using tags in the 500-700 range which were introduced in FIX 4.3. In addition, IB expands the New Order Single message through the use of Custom IB tags for the purpose of creating Conditional Orders. Please see Appendix B for a full list of IB's custom tags.

New Order Single: Basic

This message is used to submit a new order. IB supports the following basic order types:

- Market.
- Limit.
- Stop.
- Stop Limit.

Note: The FIX 4.2 standard refers to Market on Close and Limit on Close orders as being a specific order type. Conversely, it refers to Market on Open and Limit on Open as a selection in tag 59 (TimeInForce). Although IB believes that the terms MOC and LOC actually refer to a Time in Force specification, IB follows the FIX 4.2 standard in this matter.

The following tags are required on the new order single message for Basic orders. See Appendix B and C for further details on these fields.

Tag	Field Name	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = D
1	Account	N*	Required for sessions that route orders to multiple IB accounts.
111	MaxFloor	N	Used to create Hidden or Iceberg Orders
11	ClOrdID	Y	
15	Currency	N*	This tag is required if tag 100=SMART or if ISIN/CUSIP is used
55	Symbol	Y	
48	SecurityID	N	Either CUSIP or ISIN identifier
22	IDSOURCE	N	Either 1=CUSIP or 4=ISIN
21	HandlInst	Y	
54	Side	Y	
38	OrderQty	Y	
40	OrdType	Y	

Tag	Field Name	Req'd	Comments
18	ExecInst	N	Used to create Relative, Market Peg, Trailing Stop, and VWAP orders
211	Peg Difference	N	Used to create Relative, Market Peg, & Trailing Stop Orders
44	Price	N	Required depending on order type specified in tag 40
99	StopPx	N	Required for stop and stop limit orders
59	TimeInForce	N	
204	CustomerOrFirm	Y*	Used to specify Order Capacity. In lieu of 204, tag 47 or 6122 can be used to specify capacity.
58	Text	N	Taken as a comment only.
77	OpenClose	Y*	Required for options only
114	Affirmative Determination	Y*	Required for short sale orders involving U.S. equity securities ("stocks"). If customer uses IB as its executing broker and uses a clearing broker other than IB (a "Non-Cleared Customer") and Tag 6086 contains the value "1" or "2", this Tag 114 must contain the value "N". If customer uses IB as its executing broker and clearing broker (a "Cleared Customer"), then customer is not required to populate this field. However, a Cleared Customer does have the option to populate this Tag 114 with the value "Y" only (not the value "N").
167	SecurityType	N	Required if trading security type other than equity. Note: IB can accept 167=STK or 167=CS for equity.
201	PutOrCall	N	Required if 167 = OPT
202	StrikePrice	N	Required if 167 = OPT
200	MaturityMonthYear	Y*	Required if 167 = OPT or FUT
205	MaturityDay	N	Required if 167 = OPT on certain markets where there MaturityMonthYear alone may cause ambiguity.
207	SecurityExchange	N	Can be used if tag 100=SMART to identify primary exchange
231	ContractMultiplier	N	Can be used to identify option contracts in conjunction with tag 55
432	ExpireDate	N	Use this field to specify a Good Until date
126	ExpireTime	N	Use this field to specify a Good Until time and date
388	DiscretionInst	N	
389	DiscretionOffsetValue	N	
168	EffectiveTime	N	Use this field to specify a Good After time and date
100	ExDestination	Y	If "SMART" is used either tag 207 or tag 15 must be used
439	ClearingFirm	Y*	Required if multiple clearing account information is on record in the clearing account information file. *See tag 439 notes below
440	ClearingAccount	Y*	Required for futures

Tag	Field Name	Req'd	Comments
5700	MPID	Y*	<p>Tag 5700 is required for short sale orders involving U.S. stocks to indicate the present location of the shares that are to be delivered in connection with customer's short sale order.</p> <p>Customers who use IB as their executing broker only, must enter a valid Market Participant Identifier ("MPID") for the clearing broker or other custodian with whom the customer has arranged to borrow the shares that are to be delivered in connection with customer's short sale order.</p> <p>A list of MPID's is located at: http://www.interactivebrokers.com/MPIDlist. If you do not see a valid MPID for your clearing broker or custodian, you must send an e-mail to: proserve@interactivebrokers.com. (Note: This field will be automatically populated with the MPID "IBKR" for those customers who use IB as both their executing broker and clearing broker).</p> <p>Note: if more then one MPID needs to be included, you can list more then one using a comma (,) as a delimiter.</p>
6035	IB Local Symbol	N	
6010	Order Reference Account	N	
6058	TradingClass	N	
6086	ShortSaleRule	Top of Form Bottom of Form	<p>The valid values are either "1" or "2".</p> <p>The value "1" may only be used by an IB customer who uses IB as its executing broker only and does not use IB as its clearing broker (a "Non-Clearing Customer"). The value "1" may only be used by a Non-Clearing Customer who has arranged with its usual clearing broker or custody agent (on file with and made known to IB) to borrow the shares that are required to be delivered in connection with the short sale order.</p> <p>The value "2" may only be used by a Non-Clearing Customer who has arranged with a clearing broker or custody agent other than its usual clearing broker or custody agent to borrow the shares that are required to be delivered in connection with the short sale order. If a Non-Clearing customer uses the value "2" for this Tag 6086, the Non-Clearing Customer must also use Tags 114 (with the value "N") and 5700 (with the clearing broker's or custody agent's MPID).</p> <p>An IB customer who executes and clears through IB (a "Cleared Customer") may not use this Tag 6086.</p>
204	CustomerOrFirm	Y	Required for Options Orders to identify capacity. For non-option orders, can be replaced by sending tag 47 or 6122
	<i>Standard Trailer</i>	Y	

IB SMART Routing

When specifying a product, if "SMART" is specified in tag 100 (ExDestination), then either tag 207 (SecurityExchange) or tag 15 (Currency) must be included as well. Specifying an exchange or currency will help specify the proper product if two different products exist with the same

symbol. If tag 207 is used, it should be the primary exchange of that product. For example, US options on IBM could specify the CBOE in tag 207, US stocks could specify NYSE in tag 207. If tag 15 is used, it should represent the base currency of the country the product is listed in. Even though it is only necessary to include either tag 15 or 207, IB recommends including both.

Stock Security Definition

Stock orders can be routed either by ticker symbol using tag 55 (Symbol) or via security identifiers. The latter method requires CUSIP or ISIN code specified in tag 48 (SecurityID). If tag 48 is used, tag 22 must also be included which identifies the type of code used in tag 48. Tag 55 could be omitted if stocks are identified via security identifiers.

Derivative Contract Definition

Derivative contract orders which include futures, options (including options on futures) and warrants can be routed by either by specifying either:

- Full exchange symbol in tag 6035 (IBLocalSymbol) and exchange in tags 207 (SecurityExchange) or 100 (ExDestination).
- Root symbol (a.k.a. Trading Class) in tag 6058 (TradingClass) or tag 55 (Symbol), followed by standard tags 200 (MaturityMonthYear), 201 (PutOrCall), 202 (StrikePrice), and 205 (MaturityDay) if necessary. In the event that similar derivative contract exists on the same underlying or trading class with the same strike, right and expiration, but with different multipliers, tag 231 (ContractMultiplier) should be used to identify the contract.

Please note that IB system requires a different value “FOP” specified in tag 167 (SecurityType) for options on futures as opposed to standard “OPT” used for all securities options. Please also note that options on futures require tag 440 (ClearingAccount) specified to identify ultimate beneficiary account, the same as futures. There is no such requirement for security options.

Foreign Exchange Definition

Tags 55 (Symbol) and 15 (Currency) are used for identifying Foreign Exchange (a.k.a. FX) currency conversions. Tag 55 represents the currency being acquired. Tag 15 represents the base currency. For example, to purchase EUR with USD it would be tagged 55=EUR, 15=USD. Tag 167 (SecurityType) should be set to CASH. Tag 38 (OrderQty) represents the number of destination currency units you wish to buy or sell. Tag 44 (Price) represents the price in base currency for one unit of destination currency. Please note that in Foreign Exchange trading the name for IB Smart Routing destination specified in tag 100 (ExDestination) is “IDEALPRO” instead of “SMART” which is used elsewhere.

Fixed Income Definition

Corporate, government, and municipal bond securities on all orders must be identified using ISIN via tags 48 (SecurityID) set to ISIN value and tag 22 (IDSource) set to “1”. Tag 167 (SecurityType) must be set to “BOND”. All bond orders must be routed using IB Smart Router with tag 100 (ExDestination) set to “SMART”.

Spot Definition

Spot products must be identified using tag 55 (Symbol) and routed to IB Smart router with tag 100 (ExDestination) set to “SMART”. For instance, spot gold symbol is XAUUSD. Tag 167 (SecurityType) must be set to “CMDTY”. Please see <http://www.interactivebrokers.com> for the list of supported spot products and corresponding symbols.

Contract for Difference Definition

Contract for Difference (CFD) products must be identified using tag 55 (Symbol) and routed to IB Smart router with tag 100 (ExDestination) set to "SMART". Tag 167 (SecurityType) must be set to "CFD".

Multiple Account Routing

For sessions which are configured to route orders to more than one account at IB, tag 1 is used to designate the account number that the order is intended for. By default, the IB account number is to be supplied in that tag. The account number is typically in the format NC123456 or UG123456. However, if it is necessary, it is possible to map that account number to some other unique account designation that is agreed upon in advance. Obviously, if such mapping is used, IB would need to be notified prior to any modifications or additions.

Cleared accounts use account designations typically in the format, U123456. For cleared sessions configured with multiple accounts available for order entry through a single FIX session, tag 1 (Account) must be specified as corresponding cleared account number.

Simultaneous FIX and TWS Access

It is possible to route orders to IB cleared or execution-only accounts from both a FIX session and a Trader Workstation (TWS) session simultaneously. Orders placed in the FIX session should be viewable on the TWS. If a specific convention is used for the ClientOrderID's the orders placed in one session can be modified or canceled in the other as well.

The TWS uses a convention whereby each successive modification of the order is followed by a decimal point and an iteration number. The original order would end with ".0 ". The second orderID would end with ".1", etc. To the left of the decimal point the ClientOrderID must only be numbers without any letters or symbols (including additional decimal points).

All relevant messages, pending acknowledgements, acknowledgements, pending cancels, cancel confirms, pending replace, replace, fill, and partial fill are reported in both sessions. Orders that are placed through FIX and modified on the TWS will receive a modified confirmation in the form 150=D, 39=5. Orders placed through FIX that are canceled on the TWS receive a standard unsolicited cancel message in the FIX session.

NOTE: when trading in this configuration, be careful not to submit any order types on the TWS that your FIX engine cannot interpret. For example, if you are going to place a spread order on the TWS, be sure your FIX certification with IB included spread orders.

Execution Only Orders

For execution only customers who do not clear through IB, we recommend to always include appropriate clearing firm ID in tag 439 (ClearingFirm). If tag 439 is not included in an order, one of two things will happen depending on how many clearing firms are configured for that account:

- If only one clearing firm is configured for the account, the order will default to that firm if tag 439 is not included.
- If multiple clearing firms are configured for the account, the order will reject if tag 439 is not included.

Good Until and Good After Orders

IB FIX customers can specify the effective date and/or time when an order should be canceled. This can be achieved by using either tag 432 (ExpireDate) or tag 126 (ExpireTime):

- If good after date and time need to be specified then tag 126 should be used. The date and time stamp should be in GMT in the following format `yyyymmdd-hh:mi:ss`.
- If good after date needs to be specified, then tag 432 should be used following `yyyymmdd` format. When using tag 432 the order will be canceled at the time traded securities stops trading on the good after date.

Similarly, you can specify the activation date and time of your order by using tag 168 (EffectiveTime). The format should be `yyyymmdd-hh:mm:ss` and the time should be in GMT

Short Sale Exempt Stock Orders

In response to amendments to Regulation SHO by the SEC, a US broker-dealer may now mark certain qualifying US stock short sale orders "short exempt" (54=6 for single leg orders or 624=6 for multi-leg orders). SEC rule 201 identifies conditions under which US stocks traded on US national exchanges may become temporarily restricted for short sale at or below the current national best bid (NBB). An execution-only customer of Interactive Brokers which is also a US registered broker-dealer may rely on one of the exceptions defined under SEC rule 201 when placing short sale orders under the above price restriction conditions. If an exemption is claimed the order must be marked as short exempt and an exemption reason must be specified via tag 1688 (ShortSaleExemptionReason) for single leg orders, or via tag 1689 (LegShortSaleExemptionReason) for stock leg of multileg orders. The following integer values must be passed in tags 1688 and 1689 on short exempt orders.

Enum	Name	Description
0	Exception Reason Unknown	An exemption reason not provided or received
1	Incoming Short Sale Exempt	Agency broker has the customer's exemption reason, which is not explicitly provided to executing broker.
2	Above NBB (B/D Provision)	Broker/dealer responsible for enforcing exemption rule has determined that the order is priced one or more ticks above the national best bid (NBB) of the security to be traded. Note: This exemption reason is not currently supported by IB. Short sale exempt orders with this exemption reason will be rejected.
3	Delayed Delivery	The broker-dealer has a reasonable basis to believe the seller owns the covered securities (pursuant to Rule 200 in the U.S.), but is subject to restrictions on delivery, provided that the seller intends to deliver the security as soon as all restrictions on deliver have been removed.
4	Odd-Lot	The broker-dealer has a reasonable basis to believe the sale is by a market maker to offset customer odd-lot orders or to liquidate an odd-lot position that changes such broker's or dealer's position by no more than a unit of trading. Note: Orders that have a quantity that is not less than one normal trading unit and have this exemption reason will be rejected.
5	Domestic arbitrage	The sale is connected to a bona-fide domestic arbitrage transaction.
6	International Arbitrage	The sale is connected to an international arbitrage transaction.

Enum	Name	Description
7	Underwriter or Syndicate Distribution	The short sale is (i) by an underwriter or member of a syndicate or group participating in the distribution of a security in connection with an over-allotment of securities; or (ii) is for purposes of a lay-off sale by an underwriter or member of a syndicate or group in connection with a distribution of securities through a rights or standby underwriting commitment.
8	Riskless Principal	The short sale by a broker or dealer effecting the execution of a customer purchase or the execution of a customer "long" sale on a riskless principal basis.
9	VWAP	The short sale order is for the sale of a covered security at the volume weighted average prices (VWAP) meeting certain criteria.

IB does not currently support exemption reason 2 above. Short exempt orders placed with that exemption reason will be rejected. Short exempt orders placed with exemption reason 4 above will be rejected if order quantity of single leg order in tag 38 (OrderQty) or leg order quantity determined as a product of tag 38 and tag 623 (LegRationQty) is not less than one normal trading unit. Short exempt orders placed with rejection reasons 8 and 9 will only be accepted for done away orders.

Short exempt orders for qualifying US stocks under SEC rule 201 that are placed without exemption reason specified (via tags 1688 or 1689) will be rejected.

Customers who use Interactive Brokers clearing services or any non US registered broker-dealer customers may not submit short exempt orders. Short exempt orders entered by these categories of customers will be rejected.

Short exempt orders may be placed outside of the time interval where short sale price restriction condition is in force for a given stock. Clients may enter such orders with Good-Till time-in-force, in which case IB will apply the specified exception reason each time the order is routed for execution.

New Order Single: Advanced Order Types

IB Supports a number of advanced order types. The order types listed below can be created using the standard New Order – Single message with some modifications or additions to the tags used.

Through the use of the Pegged order type, the following order types can be created:

- Primary Peg (Relative), Market Peg, Trailing Stop, and VWAP

The following order types can be created using additional standard FIX tags:

- Hidden, Iceberg, Discretionary, OCA

In addition, IB has created custom tags (6000+) to allow for the creation of:

- Conditional Orders, Auto Stops/Bracket Orders, P.I.P (Price Improvement on the BOX), Relative to Stock (Delta) order

Note: not all order types are available on all exchanges. For an updated list, please refer to the Order Types section of our website at:

http://individuals.interactivebrokers.com/en/p.php?f=orderTypes&ib_entity=llc

Relative Order

A Relative order is pegged to buy on the best bid plus an optional offset, and sell on the best ask minus an optional offset. A limit price can be set to cap these price movements to certain levels.

For a detailed description of the relative order type, see the order type page at:

http://www.interactivebrokers.com/en/trading/orders/relative.php?ib_entity=llc

To create a Primary Peg (relative) order:

- Set the OrdType (tag 40) to P (pegged)
- Set the Execlnst field (tag 18) to R (primary peg)
- Set the PegDifference (tag 211) to the Relative offset of your choice

To place a GTC relative order to sell 100 shares of IBM stock with a limit price of 80 and an offset of -0.5 SMART route orders:

```
8=FIX.4.2 9=0204 35=D 34=000007 43=N 52=20040212-12:2:00:01 49=acompid 56=IB
122=20040212-12:00:01 11=6020 38=100 40=P 211=-.05 18=R 55=IBM 6035=IBM
44=80.0 54=2 59=1 47=A 100=SMART 204=0 77=O 440=U150000 10=115
```

Market Peg

Market Peg orders are similar to Primary Pegged except that buys get pegged to the offer and sells to the bid.

To create a Market Peg order:

- Set tag 40 (OrdType) to P (pegged)
- Set tag 18 (ExecInst) to P (market)
- Set tag 221 (PegDifference) to 0.01

To place a GTC Market Peg order to sell 100 shares of MSFT stock on ISLAND:

```
8=FIX.4.2 9=0204 35=D 34=000007 43=N 52=20040212-12:2:00:01 49=acompid 56=IB
122=20040212-12:00:01 11=6021 38=100 40=P 211=0.01 18=P 55=MSFT 6035=MSFT
54=2 59=1 47=A 100=ISLAND 204=0 77=O 440=U150000 10=115
```

For a detailed description of the market peg order type, see the order type page at:
http://www.interactivebrokers.com/en/trading/orders/peggedMarket.php?ib_entity=llc

Trailing Stop

A trailing stop is a sell order where the stop price is set at some fixed amount below the market price. If the market price rises, the stop loss price rises by this amount, but if the stock price falls, the stop loss price doesn't change. This technique allows an investor to specify a limit on the maximum possible loss, without setting a limit on the maximum possible gain. "Buy" trailing stop orders are the mirror image of sell trailing stop orders, and are used in falling markets.

To create a trailing stop order:

Method 1:

- Set tag 40 (OrdType) to P (pegged)
- Set tag 18 (ExecInst) to R (primary peg)
- Set tag 99 (StopPx) to your desired trailing amount

Method 2:

- Set the OrdType (tag 40) to P (pegged)
- Set the ExecInst field (tag 18) to a (trailing stop peg) (FIX 4.4)
- Set the PegDifference field (tag 211) to your desired trailing amount

To place a GTC Trailing Stop order to sell 100 shares of IBM stock with a .50 trailing amount on the NYSE: (using suggested FIX 4.4 method):

```
8=FIX.4.2 9=0204 35=D 34=000007 43=N 52=20040212-12:00:01 49=acompid 56=IB
122=20040212-12:00:01 11=6022 38=100 40=P 211=.50 18=a 55=IBM 6035=IBM 54=2
59=0 47=A 100=NYSE 204=0 77=O 440=U150000 10=115
```

By default, trailing stop offsets are fixed amounts. However, if Method 2 is used for the submission of trailing stop orders, it is also possible to specify a percentage trailing amount. To do this, tag 6268 (TrailingAmtUnit) is used to designate whether a stop offset amount in tag 211 should be interpreted as an absolute or a percentage.

Valid Values for tag 6268:

0 = Use absolute amount (default if 6268 is not sent)

100 = Use percentage offset amount

If tag 6268 = 100 and tag 211=5, that would be interpreted as a 5% trailing offset.

If tag 6268 = 0 (or is omitted) and tag 211=5, that would be interpreted as a 5 point trailing offset.

For a detailed description of the trailing stop order type, see the order type page at:
http://www.interactivebrokers.com/en/trading/orders/trailingStops.php?ib_entity=llc

Trailing Stop Limit

IB also supports the submission of Trailing Stop Limit orders. Trailing stop limit orders are like trailing stop orders except that they become limit orders when triggered rather than market orders. A second offset is used to designate a limit price once the order triggers. The offset can be positive, negative, or zero. It is added or subtracted from the stop election price when the order is triggered.

The order type specified in tag 40 (OrdType) should be set to TSL.

The limit price is specified in tag 44 (Price)

The Peg Difference is specified in tag 211 (PegDifference)

The Limit offset is specified in tag 6370 (StopLimitDiff)

```
8=FIX.4.2 9=0177 35=D 34=474 49=acompid 56=IB 52=20080225-19:51:29 1=10000319
167=STK 11=AAA-0725-02252008 18=R 21=2 38=100.0 40=TSL 6370=-0.10 211=0.50
47=A 54=2 55=F 60=20080225-19:51:29.234 10=142
```

For a detailed description of the trailing stop limit order type, see the order type page at:
http://www.interactivebrokers.com/en/trading/orders/trailingStopLimit.php?ib_entity=llc

Barrier / Adjustable Stop Orders

Barrier orders, (referred to as “adjustable stop” orders on the Trader Workstation), allow you to set target points, (“barriers”), which when met, modify the specifics of the order you placed. This can be used to change the stop price on a stop limit, or change the trailing amount on a trailing stop order, or even change a trailing stop into a stop or stop limit.

Barrier orders apply to the following order types:

- Stops
- Stop Limits
- Trailing Stops
- Trailing Stop Limits

The following custom FIX tags are used to accomplish this..

Tag	Field Name	Req'd	Comments
6257	NoBarriers	Required if any barriers are to be included in a supported order	Specifies the number barriers. (multiple barriers can be set for an order)
6258	BarrierPrice	Required if tag 6257 > 0	Specifies the barrier trigger price
6259	BarrierStopPrice	Required if included on any other barrier definitions for that same order	Specifies the new stop price for the order once the barrier price is reached
6260	BarriertrailingAmt	Required if included on any other barrier definitions for that same order	Specifies the new trailing amount (absolute or percentage depending on tag 6269) for the order once the barrier price is reached

Tag	Field Name	Req'd	Comments
6261	BarrierPriceDelimiter	Required for all barrier orders	Specifies the new order type when the barrier is reached. 3 = Stop 4 = Stop Limit T = Trailing Stop TSL = Trailing Stop Limit
6262	BarrierLimitPrice	Required if included on any other barrier definitions for that same order	Specifies the new limit price for the order once the barrier price is reached
6269	BarrierTrailingAmtUnit	If omitted trailing stop orders default to 1 = absolute	Specifies whether the BarrierTrailingAmt specified in tag 6260 should be interpreted as a percentage or absolute number 0 = absolute number 100 = percentage

Tags 6258 through 6269 can be repeated to include multiple barriers.

When multiple barriers are used, the BarrierPrice (trigger price for the barrier) for each subsequent barrier must move in the same direction.

For Buy orders, each subsequent barrier trigger price must be less than the prior.

For Sell orders, each subsequent barrier trigger price must be greater than the prior.

Repeating tags that are sent in one of the barrier definitions must be sent in all other barrier definitions. Tags that may not apply to a specific order type may be left blank. (6262=) For that reason, it is recommended that if the order type is to be changed in subsequent barriers, include all tags on all barrier definitions, leaving those that are unnecessary blank.

Barrier definitions can be modified using the standard message type 35=G as long as the condition in the active barrier has not yet been met. Once the condition of the barrier has been met, the order can no longer be modified.

For a detailed description of adjustable stops, see the order type page at:

http://www.interactivebrokers.com/en/trading/orders/adjust.php?ib_entity=llc

Hidden / Iceberg Orders

A Hidden order allows you to submit an order (generally a large volume order) without publicly disclosing the order information. Hidden orders are only available for US equity orders routed through Island.

An Iceberg order allows you to submit an order (generally a large volume order) while publicly disclosing only a portion of the submitted order. Iceberg orders are available for smart routed US equity, Xetra routed, and Globex routed orders. Iceberg orders are exchange native except for Globex where they are simulated by IB.

To create a Hidden order, include tag 111 with a value of 0. Hidden orders are valid on ISLAND only.

To create an Iceberg order, include tag 111 with a number representing the number of shares reflected.

For a detailed description of hidden and iceberg orders, see the order type pages at:

http://www.interactivebrokers.com/en/trading/orders/hidden.php?ib_entity=llc

and

http://www.interactivebrokers.com/en/trading/orders/iceberg.php?ib_entity=llc

Guaranteed VWAP Orders

IB supports guaranteed VWAP orders for large cap US stocks. The VWAP for a stock is calculated by adding the dollars traded for every transaction in that stock ("price" x "number of shares traded") and dividing the total shares traded.

A VWAP is computed from the open of the market to the market close, and is calculated by volume weighting all transactions during this time period.

To create a VWAP order:

- Set tag 40 (OrdType) to P (pegged)
- Set tag 18 (ExecInst) to W (peg to VWAP)
- Set tag 100 (ExDestination) to VWAP
- Tag 168 (EffectiveTime) can be optionally included to set a VWAP start time.

To buy 100 shares of IBM stock VWAP:

```
8=FIX.4.2 9=0204 35=D 34=000007 43=N 52=20040212-12:2:00:01 49=acompid 56=IB
122=20040212-12:00:01 11=6023 38=100 18=W 40=P 55=IBM 167=CS 54=1 59=0 47=A
100=VWAP 77=0 10=099
```

An execution report is sent immediately with a zero price. A trade restatement is later sent replacing the zero price with the VWAP price.

For a detailed description of our guaranteed VWAP orders, see the order type pages at: http://www.interactivebrokers.com/en/trading/orders/vwap.php?ib_entity=llc

Discretionary Orders

A Discretionary Order is a limit order for which you define a discretionary amount (which is added to or subtracted from the limit price) that increases the price range over which the order is eligible to execute. The original limit price is displayed to the market.

To create a discretionary order, tags 388 (DiscretionInst) and 389 (DiscretionOffset) must be used in addition to the regular order tags.

Tag 388 is used to identify the price a discretionary offset is related to. IB only supports 0 = Related to displayed price. Tag 389 is used to specify the discretion offset.

For a detailed description of Discretionary orders, see the order type pages at: http://www.interactivebrokers.com/en/trading/orders/discretionary.php?ib_entity=llc

One Cancels All Orders

Orders in a One-Cancels-All ("OCA") group of orders will be canceled when one of the other orders in that same group is executed or canceled. Open order quantity for orders that are linked using an OCA group will be reduced proportionally when a linked order partially executes.

OCA groups can be specified using tag 583 (CIOrdLinkID)

Tag 583 must contain the word "IBOCAGROUP" and be followed by a name you assign to the OCA group. Example: 583=IBOCAGROUP group1

For a detailed description of an OCA order, see the order type pages at: http://www.interactivebrokers.com/en/trading/orders/oca.php?ib_entity=llc

Auto Stop / Bracket Orders

It is possible to submit orders which are contingent upon the execution of another order. This is used to create Auto Stops and Bracket Orders.

Auto Stops are stop orders which are not submitted until a parent order fills.

Bracket Orders involve an OCA group of orders which are not submitted until a parent order fills.

Tag 6107 (ParentClientID) is used in a Child order to specify the original clientOrderID of the Parent order. Although acked immediately, child orders will not be submitted until the parent order fills. Partial executions of the parent order will activate the respective quantity of the child orders. Attention must be given to the number of contracts/shares executed on the parent order to determine what is actively working on the child orders.

For a detailed description of a bracket order, see the order type page at: http://www.interactivebrokers.com/en/trading/orders/bracket.php?ib_entity=llc

Price Improvement Auction Orders

Interactive Brokers' customers submitting Smart marketable options orders will have their orders routed to BOX when BOX is at the NBBO, and Interactive Brokers has information that there is an NBBO improvement order on the opposite side of the trade, in which case your order will be exposed to a price improvement auction.

For option orders routed to the Boston Options Exchange (BOX) you may elect to participate in the BOX's price improvement auction in pennies. All BOX directed price improvement orders are immediately sent from Interactive Brokers to the BOX order book, and when the terms allow, IB will evaluate it for inclusion in a price improvement auction based on price and volume priority. Enter your order price in penny increments, and it will be rounded to the nearest listed increment in favor of the order (bids and offers will continue to be listed in increments of \$0.05 or \$.10) until the start of the auction. Should an auction start, your improvement amount will be the absolute difference of your order price in pennies and your rounded listed price. You may choose one of the following auction strategies using tag 6173 (DiscretionaryType). Valid values are:

- 1 = Discretionary Matching (passive) – you will participate in the auction by matching the current auction price, but will not exceed your price improvement amount.
- 2 = Discretionary Improving (aggressive) – you will participate in the auction by bidding higher (offering lower) than the current auction price, but will not exceed your price improvement amount.
- 3 = Transparent (fixed) – your full price improvement amount will be submitted at the start of the auction.

If no value is specified Discretionary Matching (1) will be used by default.

For a detailed description of Price Improvement Auction order, see the order type page at: http://www.interactivebrokers.com/en/trading/orders/priceImprovement.php?ib_entity=llc

Pegged to Stock (Delta) Orders

Pegged to stock orders are currently supported only on Boston Options Exchange.

Using the IB custom value of “s” in tag 18 (ExecInst), it is possible to create an option order which is pegged to the price of a stock using a specific delta. The order works as follows. For the limit order that you specify, you can specify a reference price, a delta, and a high and low range in which the order is active. When the order is active, the limit price will be modified using the following formula.

$$(\text{midpoint} - \text{refprice}) * (\text{delta}/100)$$

To create a delta order, the following tags must be used:

- Tag 40 (OrdType) set to “P” designates the order type as pegged.
- Tag 18 (ExecInst) set to “s” (custom IB value) designates the order as “pegged to stock”.
- Tag 6151 (StockRefPrice) designates the reference price for the order. This is the price that the midpoint is compared to.
- Tag 6152 (StockRangeLower) designates the lower price limit. If the stock goes below this price, the order is canceled.
- Tag 6153 (StockRangeUpper) designates the upper price limit. If the stock goes above this price, the order is canceled.
- Tag 6154 (Delta) designates the delta to be used. Valid values: (-100 to 100).
- Tag 99 (StopPx) used for this order type as the “Starting” Limit price for the order.

Sessions can be configured to receive new acknowledgments each time the limit price is changed. The acks will appear with 39=0, 150=0, and the new limit price in tag 44. The original order specifications will also be included.

Please note that the order IDs will remain the same on each of the acknowledgements, although the limit price changes.

For a detailed description of a Pegged-to-Stock order, see the order type page at: http://www.interactivebrokers.com/en/trading/orders/peggedStock.php?ib_entity=llc

Conditional Orders

The conditions attached to a Conditional order state that the order will automatically be submitted OR cancelled only if specified criteria for one or more defined contracts are met. You can specify stocks, options, futures or security index criteria to trigger a conditional order. Conditional orders can be created using IB custom defined tags. The following tags are used in addition to the standard tags in a New Order Single message.

Tag	Field Name	Req'd	Comments
6136	ConditionListSize	Y	Required only once for a conditional order
6128	ConditionIgnoreRth	N	Required only once for a conditional order
6579	CondSubmitCancel	Y	Required only once for a conditional order
6124	CondExch	Y	Repeated for each condition

Tag	Field Name	Req'd	Comments
6125	CondPrice	Y	Repeated for each condition
6126	ConditionOperand	Y	Repeated for each condition
6127	ConditionTriggerMethod	N	Repeated for each condition
6137	ConditionLogic Operant/Binder	Y	Repeated for each condition
6165	ConditionUnderlying	Y	
6166	ConditionStrike	N	Required if the condition is on an option
6167	ConditionRight	N	Required if the condition is on an option
6168	ConditionExpiry	N	Required if the condition is on an option or future
6169	ConditionSecurityType	Y	
6170	ConditionLocalSymbol	Y*	Required if tag 6165 is not used

To create a conditional order:

- Tags 6136, 6128 & 6579 must be included only once in the message.
- Tags 6124, 6125, 6126, 6127, & 6137 are repeated for each condition.

Example Conditional Order:

To buy 1 IBM Feb04 90 call for a price of 2 using SMART Routing GTC if the price of IBM Stock >= 91 using Double Bid Ask on a best quote:

```
8=FIX.4.2 9=0204 35=D 34=000007 43=N 52=20040212-12:2:00:01 49=acompid 56=IB
122=20040212-12:00:01 11=6024 38=1 40=2 55=IBM 15=USD 167=OPT 201=1 202=90.0
200=200402 44=2 54=1 59=1 47=A 100=SMART 77=O 6136=1 6128=1 6579=0 6165=IBM
6169=CS 6124=SMART 6125=91 6126=>= 6127=1 6137=n 10=248
```

For a detailed description of Conditional orders, see the order type page at: http://www.interactivebrokers.com/en/trading/orders/conditional.php?ib_entity=llc

ISE Facilitation Orders

An ISE facilitation order is a complex order type where a customer originated order (originating order) is placed by a market participant together with an instruction to trade against, (up to 40%) of that order acting as principal (counter-party order).

The facilitation order consists of the following tags added to a standard option order message.

Tag	Field Name	Req'd	Comments
6281	tXcrossC1OrdID	Y	Firm side for C1OrdID (firm equivalent to tag 11)
6282	tXCrossClearingFirm	N	Firm's ClearingFirm (firm equivalent to tag 439)
6283	tXCrossClearingAccount	N	Firm's ClearingAccount (firm equivalent to tag 440)
6284	tXCrossOpenClose	Y	Firm's OpenClose (firm equivalent to tag 77)
6285	tXCrossOptionAcct	Y	Firm's OptionAcct (firm equivalent to tag6122)
6286	tFacilitationPercentage	N	Desired percentage
6390	SolicFacilIndicator	N	Indicates Facilitation or Solicitation Valid Values: FACIL , SOLIC If omitted, defaults to Facilitation. Solicitation orders require a quantity greater then 500.
6396	sprdCrossOpenClose	Y	Required for SPREADS. Indicates the position effect for the facil/solic side of a spread order. This is to be included in the repeating groups for each leg.

Tag	Field Name	Req'd	Comments
6401	sprdCrossSide	Y	Required for SPREADS. Indicates the leg side for the facil/solic side of a spread order. This should be set to the opposite of the originating side for a given leg. This is to be included in the repeating groups for each leg.

ISE facilitation orders:

- Must have Fill-Or-Kill (FOK) time in force
- Must be routed to the ISE
- SMART routed orders will only go to the ISE
- Can't be modified
- Are either canceled ("killed") by the exchange, filled for originating side only, or filled for both originating and counter party sides.
- Orders for quantities of 499 or less must be tagged as Facilitation orders
- Orders for quantities of 500 or more can be tagged as either Facilitation of Solicitation orders
- If not specified in tag 6390, Facilitation is used by default
- Customer/Customer crosses are designated by setting tag 6285=c

```
8=FIX.4.2 9=309 35=AB 52=20050610-15:45:45 34=605 56=IB 49=acompid 11=87204

564=0 623=1 624=1 600=MSFT 609=STK 608=ESXXXX 614=100 623=100 624=2 10=128
```

IB Algorithmic Orders - Stock

IB's stock algorithms are used to optimally parse large volume orders using IB's proprietary mathematical models. These models use historical price and volume data in conjunction with user-defined risk and volume inputs. For up-to-date list of Algorithmic Order Types offered by IB please refer to the [Order Types and Algos](#) page on the IB Web Site.

Algorithmic orders are canceled using the standard 35=F message type.

Algorithmic orders can be modified using the standard 35=G order type. Any algorithmic specific value can be modified. If the type of the algorithmic order remains the same, the order continues working using the new parameters (i.e. passive to aggressive). If the algorithmic order type is modified, the order is handled as if it were a new algorithmic order for the remaining quantity from that point on.

If an order is sent with instructions to deactivate on the close, a modify message will need to be sent in order to reactivate the order.

Tag	Field Name	Req'd	Comments
18	tExecInst	Y	e (custom value used for IB algos)
847	tTargetStrategyName	Y	ArrivalPx PctVol Vwap
849	tParticipationRate	Y*	Set as percentage. *Required to set maximum participation rate for VWAP and Arrival Price algos

Tag	Field Name	Req'd	Comments
5957	tNoStrategyParameters	Y*	# Strategy Parameters Specified – *needs to be set to the number of 5958 tags included in the order. Typically set to 0, 1, or 2. Allows for riskAversion/pctVol AND forceCompletion
5958	tStrategyParameterName	Y	riskAversion pctVol forceCompletion
5960	StrategyParamterValue	Y	Aggressive Passive Neutral Get Done If 5958=pctVol, 5960 should be set to the participation percentage.
6436	tDeactivateateOnClose	Y	1=deactivate the order at the end of the day. 0=do not deactivate at the end of the day.

Arrival Price

Attempts to achieve the bid/ask midpoint price at the time the order is submitted, taking into account the user-assigned level of risk aversion which defines the pace of the execution, and the user-defined target percent of average daily volume.

User Inputs:

- Max Percentage of Average Daily Volume
- Urgency / Risk Aversion Level
- Attempt Completion by EOD

Place an order to buy up to 10,000 shares, attempting to pay the current arrival price or better, not to exceed a quantity of 1% of the daily volume. Set the risk aversion level to "Passive". Force Completion by the end of the day.

847=ArrivalPx
849=0.01
5957=2

Percent of Volume

Percent of volume algorithm attempts to participate with volume at a user-defined rate. Order quantity and volume distribution over the day is determined using the target percent of volume you entered along with continuously updated volume forecasts calculated from TWS market data.

User Inputs:

- Target percentage of participation of the Average Daily Volume

Place an order to buy up to 10,000 shares at a not to exceed 22.22% of the daily volume.

847=Pctvol
5957=1
5958=pctVol

15=USD 77=0 10=207
```

Non-Guaranteed VWAP

Non-guaranteed VWAP attempts to achieve the Volume-Weighted Average execution price (VWAP). By default the price is calculated from the time the order is submitted to the time the market closes. Alternatively, the start and/or end time can be specified to designate when the algo begins working and ends working, regardless of whether or not the entire quantity has been filled. The VWAP price is then calculated for specified start and end period.

User Inputs:

- Max Percentage of Average Daily Volume
- Start Time/End Time

Place an order to buy up to 10,000 shares paying the Volume Weighted Average Price between the time you place the order and the close, not to exceed 1% of the daily volume.

847=Vwap
849=0.01
5957=0

```

TWAP Algo

TWAP Algo attempts to achieve the Time-Weighted Average execution price. By default it is calculated from the time you submit the order to the time it completes. Alternatively, the start and/or end time can be specified to designate when the algo begins working and ends working, regardless of whether the entire quantity has been filled. Please note that TWAP price is not guaranteed.

User Inputs:

- Strategy type (trade when):
 - Matching Midpoint
 - Matching Same Side
 - Matching Last
 - Marketable
- Start Time/End Time

- Allow trading past end time

Place an order to buy up to 10,000 shares paying the time-weighted average prices between 11 am and 2 pm EST, allow the algo to continue past the specified end time if the full quantity has not been filled. Make the algo execute when the order is marketable.

IB Algorithmic Orders - Options

IB's option algorithms are used to optimally parse large volume orders using IB's proprietary mathematical models. These models use historical price and volume data in conjunction with user-defined risk and volume inputs. IB currently offers two option algo types, described below.

Algorithmic orders are canceled using the standard 35=F message type.

Algorithmic orders can be modified using the standard 35=G order type. Any algorithmic specific value can be modified. If the type of the algorithmic order remains the same, the order continues working using the new parameters (i.e. passive to aggressive). If the algorithmic order type is modified, the order is handled as if it were a new algorithmic order for the remaining quantity from that point on.

Tag	Field Name	Req'd	Comments
18	tExecInst	Y	e (custom value used for IB Algos)
847	tTargetStrategyName	Y	MinImpact BalanceImpactRisk
849	tParticipationRate	Y*	Set as percentage in decimal form. 15% would be sent as 849=0.15 *Required to set maximum participation rate for MinImpact and BalanceImpactRisk algos
5957	tNoStrategyParameters	Y*	# of strategy parameters specified – needs to be set to the number of 5958 tags included in the order. Typically set to 0, 1, or 2. Allows for riskAversion AND forceCompletion
5958	tStrategyParameterName	Y	riskAversion forceCompletion (required only for Strategy BalanceImpactRisk)

Tag	Field Name	Req'd	Comments
5960	StrategyParamterValue	Y	*When tag 5958=riskAversion, populate related tag 5960 with one of these 4 values: Aggressive Passive Neutral Get Done *When tag 5958=forceCompletion, populate related tag 5960 with 0 (false) or 1 (true) (required only for Strategy BalanceImpactRisk)

Minimize Impact

Attempts to minimize market impact by slicing the order over time to achieve a market average without going over the Max Percentage value.

User Inputs:

- Max Percentage of Average Daily Volume

Place an order to buy up to 10,000 contracts paying the Market Average Price between the time you place the order and the close, not to exceed 1% of the daily volume.

847=MinImpact

849=0.01

5957=0

```
8=FIX.4.2 9=000232 35=D 34=000002 56=IB 49=acompid 52=20080312-19:44:21 47=A

5957=0 849=0.01 10=230
```

Balance Impact and Risk

This order type attempts to balance the market impact of trading the option with the risk of price change over the time horizon of the order. The strategy considers the user assigned level of risk aversion to define the pace of the execution, along with the user-defined target percent of volume.

User Inputs:

- Max Percentage of Average Daily Volume
- Urgency / Risk Aversion Level

Place an order to buy up to 10,000 shares, attempting to pay the current arrival price or better, not to exceed a quantity of 5% of the daily volume. Set the risk aversion level to "Passive". Force Completion by the end of the day.

```

Server Managed Volatility Orders

A volatility order is an order that allows you to place an option order by specifying an implied volatility in place of a limit price. In place of a standard limit price, an order contains a volatility limit which will be calculated to a corresponding limit price. A “continuous update” flag can be set which continually modifies the calculated limit price as variables such as the underlying price change. In addition, a conditional order can be attached which will trade the underlying security against the executed option trade on a “delta” ratio calculated at the moment the option order fills.

Tag	Field Name	Req'd	Comments
44	Price	N	Only used if 6275=3
6107	ParentClientId	Y	Included only on the underlying hedge order (if included) Specifies the clientOrderID of the “parent” option volatility order.
6152	StockRangeLower	N	Underlying Price – Lower Range
6153	StockRangeUpper	N	Underlying Price – Upper Range
6275	Continuous Update	Y	2=Continuously update the price as volatility calculation changes 3=Price for main order specified by client
6279	UnderlyingRefPrice	Y	1=midpoint 2=bid or ask
6280	VolatType	Y	1=daily volatility 2=annual volatility
6290	HedgingType	Y	-1=no hedging 1=mkt hedging 2=limt E=relative order
6458	DividendSchedule	N	yyymmdd/value,yyymmdd/value
6459	InterestSchedule	N	yyymmdd/value,yyymmdd/value
6460	IsDeltaHedge	Y	1=Hedging Order Anything else or omitted=not
6467	VolatCapPercentage	N	
6468	VolatCapTicks	N	
9816	ImpVolatility	Y	Implied Volatility in %

Interest Rates and Dividends directly affect the calculation of the implied volatilities used for these orders. If tags 6458 and 6459 are not included, default interest rate and dividend schedules are used. Default interest rate schedules for US equity options are derived from the implied yields of the Eurodollar futures. Dividends are extrapolated forward using the last paid dividend. Users are encouraged to set their own dividend schedules, particularly if dividends fall close to expirations.

Any volatility order can set a range in the underlying product. If the underlying price prints outside this range, the order will be canceled. Tags 6152 and 6153 are used to specify this range.

Tags 6467 and 6468 are used as safety measures to indicate an amount that you would bid or offer through the implied ask and bid volatility which would result in the order being rejected. If you specified 1 in tag 6467 and the implied volatility that you specified in tag 9816 is more than 1% through the ask implied volatility on your buy order, the order would reject.

Example 1:

Place an order to sell 10 options receiving no less than a 35% implied volatility at the instant the order fills. Continuously update the order. No automatic hedge order. Default dividends and interest rates used.

```
8=FIX.4.2 9=000223 35=D 34=000002 56=IB 49=acompid 52=20080310-17:10:40 47=A

201=1 1=DU6922 60=20080310-17:14:26 40=2 202=22.5 77=0 6122=b 204=1 198=NONE
6437=24.44 10=095
```

Orders can be modified with a 35=G message: This modify changes the vol from 35 to 32. (tag 6275 must also be included on modifies) ** Only tag 9816 can currently be modified.

```
8=FIX.4.2 9=000124 35=G 34=000002 56=IB 49=acompid 52=20080310-19:26:41
41=004 11=004m 15=USD 54=2 9816=32.00 58=1 55=C 21=2 38=1 6275=2 40=2 10=240
```

Orders can be canceled with a 35=F message:

```
8=FIX.4.2 9=000089 35=F 34=000002 56=IB 49=acompid 52=20080310-17:27:42
11=004c 41=004m 55=CSCO 54=1 38=100 10=202
```

Example 2:

Place an order to sell 10 options receiving no less than a 22 volatility premium..

```
8=FIX.4.2 9=000237 35=D 34=000002 56=IB 49=acompid 52=20080307-20:51:43 47=A
54=2 167=OPT 60=20050120-15:13:54 38=10 58=1.00 6275=2 9816=22.00 6280=2
6279=2 6290=1 6210=SMART 200=200803 201=1 202=24 204=0 55=CSCO 59=0 40=2
100=SMART 11=017 21=2 15=USD 77=0 10=219
```

Then, hedge the order delta neutral with stock as soon as the option execution occurs, delta neutral

```
8=FIX.4.2 9=000191 35=D 34=000003 56=IB 49=acompid 52=20080307-20:51:44 47=A

59=0 40=2 100=SMART 11=003 21=2 15=USD 77=O 10=219
```

Stop Trigger Methods

Trigger Method	Tag 6127 Representation	Description
Last	2	For a sell (buy) order to be triggered, one last price value must be less than (greater than) or equal to the trigger price, and the exchange or other market center where the order is to be executed must also publish (and IB's systems must also receive) an ask price equal to or higher than, and a bid price equal to or lower than, the trigger price.
Bid / Ask	4	For a sell (buy) order to be triggered, a single ask price (bid price) value must be less than (greater than) or equal to the trigger price.
Double Last	3	For a sell (buy) order to be triggered, two consecutive last price values must be less than (greater than) the trigger price and the exchange or other market center where the order is to be executed must also publish (and IB's systems must also receive) an ask price equal to or higher than, and a bid price equal to or lower than, the trigger price.
Double bid/ask	1	For a sell (buy) order to be triggered, two consecutive ask price (bid price) values must be less than (greater than) or equal to the trigger price.
Last OR Bid/Ask	7	Combines the logic of the Last method and Bid /Ask method. Order triggers when one or the other condition is met.

Please note that "Last" and "Double Last" trigger methods have leeway to trigger up to 0.5% above the ask price or up to 0.5% below the bid price. This 0.5% amount of leeway is subject to change at any time without notice.

Pre-Trade Allocation Orders

IB allows clients to set pre-trade allocation criteria within the order message. By utilizing FIX tags 78 (NoAllocs), 79 (AllocAccount) and 80 (AllocShares), order routing clients can configure the allocation parameters. The number of allocations indicated in FIX tag 78 must match the number of repeating groups of tags 79/80 following tag 78.

- IB master account must be placed in tag 1 (Account)
- IB subaccount values must be placed in tag 79

Example:

Assume an advisor (master account FG2200) wants to place an order for 600 shares, wanting customer account UG2201 to receive 100 shares, customer account UG2202 to receive 200 shares, and customer account UG2203 to receive 300 shares.. The advisor could create the following allocation order to accomplish that:

```
8=FIX.4.2 9=000280 35=D 34=000002 56=IB 49=acompid 52=20100812-18:15:41 54=1
60=20050120-15:13:54 100=SMART 38=600 78=3 79=UG2201 80=100 79=UG2202 80=200
79=UG2203 80=300 1=FG2200 204=0 205=18 439=0017 40=1 11=141539001.0
200=201009 201=1 202=25 77=O 58=John 55=CSCO 15=USD 167=OPT 10=177
```

Execution Reports

Allocated orders execute into the master account and are then reallocated out into the appropriate sub-accounts. For that reason, you will receive several execution reports for each allocated execution. For example, for the allocation example above, you would receive the 7 execution reports below.

The first execution report is initial execution into the master account.

```
8=FIX.4.2 9=000388 35=8 34=000005 43=N 52=20100812-18:15:54 49=IB 56=acompid
37=00000364.00003b7a.4c64315d.0002 11=141539001.0 17=00003b7a.4c64319c.01.01
150=2 20=0 39=2 55=CSCO 54=1 100=BOX 207=BOX 38=600 44=0.00 32=600 30=BOX
31=0.21 14=600 151=0 6=0.21 167=OPT 200=201009 201=1 1=FG2200 60=20100812-
18:15:54 40=1 202=25 109=qajhtws / qajhfal 15=USD 77=0 204=0 205=18 55=CSCO
100918C00025000 6732=qajhfal 10=105
```

Shortly thereafter, you will see execution reports for the transfer of the pre-allocated shares out of the master account (quantity is negative) and another execution report for the transfer into one of the sub-accounts.

Transfer from account FG2200 for 100 shares:

```
8=FIX.4.2 9=000292 35=8 34=000010 43=N 52=20100812-18:15:54 49=IB 56=acompid

```

Please note that if the client's FIX engine cannot handle the zeroing out of the positions (negative execution QTY in the master / positive execution QTY into the sub-account), IB has the ability to configure the session so that pre-allocation described above occurs but only the initial execution into the master account is relayed back via FIX. Notification of the actual allocation FIX messages is suppressed.

New Order Multileg

IB allows for the placement of Multileg (spread / combination) orders only for SMART routed orders or products traded on an exchange which electronically accept that type of order. The message format is based on the Multileg format of FIX 4.3.

IB supports all 2 legged combination orders, and supports 3 and 4 legged combo orders provided that the order can be traded natively on an exchange.

Use the New Order - Multileg (MsgType=AB) message to submit a multileg order. Multileg orders use Instrument Leg Block (set of repeating tags) to define the legs of a spread. Each leg of the multileg order includes LegSide (tag 624) relevant to the leg only, while tag 54 (Side) is relevant to the whole multileg order. IB interprets values passed in tag 44 (Price) as credit (negative value), debit (positive value) or even (zero).

Below are the tags that IB uses for Multileg orders. Tags marked with a "->" indicate that the tag is a part of an Instrument Leg Block (repeated for each leg).

Tag	Field Name	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType=AB
1	Account	N*	Required for sessions that route orders to multiple IB accounts
11	ClientOrderID	Y	.
55	Symbol	Y	Underlying symbol
167	SecurityType	Y	MULTILEG or MLEG values are accepted. Please inform IB FIX integration team of the value you prefer.
38	OrderQty	Y	
54	Side	Y	
40	OrdType	Y	Only Limit orders are supported for spreads
44	Price	N	Required if OrderType is limit (40=2)
59	TimeInForce	N	Currently only Day (59=0) is supported for multileg Orders
207	SecurityExchange	Y	
15	Currency	Y	

Tag	Field Name	Req'd	Comments
439	ClearingFirm	Y*	Required if multiple clearing firms are on file with IB.
440	ClearingAccount	N	Required if spread includes FUTURES
555	NoLegs	Y	Number of legs that make up the security
-> 600	LegSymbol	N	Required only if it is different from symbol
-> 608	LegCFIcode	Y	OC – call option, OP – put option, ES - stock
-> 609	LegSecurityType	N	
-> 611	LegMaturityDate	N	Required only for futures, options and warrants (replaces tag 610)
-> 612	LegStrikePrice	N	Required only for options and warrants
-> 616	LegSecurityExchange	N	Required for IBEFP combos
-> 623	LegRatioQty	Y	.
-> 624	LegSide	Y	1=Buy, 2=Sell
-> 614	LegContractMultiplier	N	.
-> 654	LegRefID	N	Identifies the leg for subsequent references
-> 564	LegPositionEffect	Y	Possible Values: O (Open) or C (Close)
-> 6215	LegLocateReqd	Y1	N = Shares are with customer's clearing broker Y = Shares are with IBKR ("Y" may only be indicated if the customer clears through IBKR).
-> 6216	LegLocateBroker	Y1	Clearing broker's or custody agent's MPID.
-> 6680	LegClearingFirm	N	Per-Leg clearing firm for multi-leg orders. Order should contain blank values for all legs except stock legs
6086	ShortSaleRule	Y1	Indicates that the customer has arranged with a clearing broker or custody agent to borrow the shares required to be delivered in connection with the short sale. Valid values are "1" or "2".
6248	SmartComboGuarantee	N	0 = guaranteed 1 = non-guaranteed
	Standard Trailer	Y	.

New Order Message – Sell 1 Spread defined as (Buy 1 OIH Oct04 85 Call and Sell 1 Oct04 90 Call) for a limit of .80 (because it is defined as a sell in tag 54, .80 will be interpreted as a credit)

```
8=FIX.4.2 9=303 35=AB 52=20041001-15:57:59 34=27414 56=IB 49=acompid
11=3690702 55=OIH 38=1 54=2 40=2 44=0.8000 59=0 15=USD 207=ISE 204=0 47=A
440=37743127 167=MULTILEG 555=2 600=OIH 609=OPT 608=OCXXXX 610=200410 612=85
614=100 564=O 623=1 624=1 600=OIH 609=OPT 608=OCXXXX 610=200410 612=90
614=100 564=O 623=1 624=2 10=169
```

Order Modification

Modification of a Multileg Order: IB supports message type 35=AC. Only the quantity or price can be modified. The values passed in the Instrument Leg Block tags on modify messages do not affect the order parameters. It is suggested to not include them in the cancel/replace message.

Cancellation

Multileg orders are canceled using the Order Cancel Request (MsgType = F). The entire multileg order is cancelled by tag 37 (OrderID) or tag 11 (ClOrdID). It is not possible to cancel one leg of a multileg order without canceling the entire multileg order.

Orders with Stock Leg

When creating a combination order which includes a leg that is a stock, it is necessary to include the stock leg last (with the necessary regulatory tags 6086, 6215, & 6216). Also, leg multiplier for a stock leg should be in 100 increments (i.e. 100, 200, 300, etc.)

If a multi-leg order includes a leg which involves the short sale of a US equity, the appropriate regulatory tags 624, 6086, 6215 and/or 6216 must be included. For multi-leg stock orders, tag 624 is used to indicate that the order is a short sale (value = "5").

Customers who do not clear their trades through Interactive Brokers may either:

- Use Tag 6086 with a value = "1" to indicate that the customer has arranged with its clearing broker or custody agent (the Clearing Firm designated in Tag 439 on the order) to borrow the shares that are to be delivered in connection with the short sale tag; and Tag 6215 with a value = "N"; or
- Use Tag 6086 with a value = "2" to indicate that the customer has arranged with a clearing broker or custody agent other than the Clearing Firm designated in Tag 439 on the order; Tag 6215 with a value = "N" to indicate that the customer has arranged with such clearing broker or custody agent to borrow the shares that are to be delivered in connection with the short sale order; and Tag 6216 to indicate the MPID of such clearing broker or custody agent.

Customers who clear through Interactive Brokers should:

- Use Tag 6215 = "Y" to indicate that IB will borrow the shares that are to be delivered in connection with the short sale. If customer wishes to also use Tag 6216, the value must be IBKR (Interactive Brokers).

Note: Tag 616 must be included on the legs with an exchange designation for each leg.

Tag 55 not required

If one of the legs is a short-sale, tags 6215 and 6216 must be included on both legs.

The leg that isn't a short sale would include tags 6215 and 6216 set to null.

```
8=FIX.4.2 9=000311 35=AB 34=000002 56=IB 49=acompid 52=20061005-15:01:15
11=110114001.0 38=100 54=1 40=2 44=51.70 59=0 15=USD 100=SMART 204=0 47=A

623=1 616=ISLAND 624=1 612= 614= 610= 10=234
```

Orders with Futures Leg

When creating a combination order which includes legs that are futures, tag 440 (ClearingAccount) must be included once in the message.

Note: Tag 616 must be included on the legs with an exchange designation for each leg.

For example, buy 1 spread defined as selling the IBM Nov Single Stock Futures and buying IBM STK for a debit of \$0.10:

```
8=FIX.4.2 9=303 35=AB 52=20040915-16:32:33 34=17794 56=IB 49=acompid 11=10003

600=IBM 609=STK 608=ESXXXXX 564=O 623=100 616=NYSE 624=1 100=IBEFP 10=182

Execution Report

The execution report message is used to:

- Confirm the receipt of an order
- Confirm changes to an existing order (i.e. accept cancel and replace requests)
- Relay order status information
- Relay trade reports
- Reject orders
- Report trade busts or restatements

Tag	Field Name	Req'd	Comments
	Standard Header	Y	MsgType = 8
37	OrderID	Y	See notes below for SMART routed combo orders.
11	CIOrdID	N	
17	ExecID	Y	Unique execution identifiers are provided for the following OrdStatus types (tag 39): Partially Filled Filled Acks. Pending Acks. For OrdStatus types this field will contain 0
20	ExecTransType	Y	
19	ExecRefID	N	Provided for Cancel and Correct ExecTransType messages.
39	OrdStatus	Y	Identifies the current status of the order
103	OrdRejReason	N	Default value is: 0 = Broker Option
150	ExecType	Y	Identifies the type of Execution Report
151	Leaves Qty	Y	The amount of shares open for further execution.
63	SettlmntTyp	N	Only Regular type supported.
55	Symbol	Y	
54	Side	Y	
38	OrderQty	Y

10=170
```

Common Reject messages (text seen in FIX tag 58) frequently encountered during initial message testing:

- Invalid BD Flag or Origin. Order capacity is missing. Please include FIX tag 204 (IB supports this tag for all security types) or tags 47 or 6122
- Invalid Destination Exchange. FIX tag 100 needs to be populated with valid exchange identifier (ex 100=SMART)
- Unknown Contract. Using the information provided, IB cannot match to a known security in our database
- Ambiguous Contract. There is not enough information for IB to identify the symbol uniquely. Often including tag 15 (Currency) and/or tag 207 (SecurityExchange) can fix the issue.
- Invalid or Missing IB Cust Acct No. Account value is required. Please include IB account number in FIX tag 1 (Account).
- No Clearing Rule Found. Invalid value being sent in tag 439 (ClearingFirm)
- No trading permissions/account requirements – invalid value being sent in tag 439 (ClearingFirm)

Multileg Execution Reports

Depending on customer preferences IB can configure the FIX engine to send execution reports for Multileg orders in two different ways:

1. One execution report to acknowledge each order state change (new, modified, canceled, etc.) except for fill report. For Multileg fills, you would receive a combined multileg execution report and individual execution reports for each of the legs.
2. Execution reports are only reported for individual legs (never for the combined multileg order). This includes all types of execution reports (fills, new, modified, canceled, etc.).

Tag 6013 (ComboLegInformation) was created to identify the execution report as being for the combo or one of the legs. With the adoption of the FIX 4.3 standard, tags 442 and 654 were introduced that perform the same function. IB currently uses all three tags in the execution reports it sends for combo orders.

The format is as follows:

442 (MultiLegReportingType) = 1 – Single Security (default if not specified)
= 2 – Individual leg of a multi-leg security
= 3 – Multi-leg security

If tag 442=2, then tag 654 (LegRefID) is included as well. IB returns the leg reference ID defined by the customer in Multileg New Order. IB currently supports only numeric references.

654 (LegRefID) =10 - is an equivalent for leg reference 10

Tag 6013 combines the same information as in tag 442 and 654. IB created it before the adoption of tags 442 and 654. It is still included in the combination execution reports IB sends for reverse compatibility. IB will eventually stop supporting tag 6013 following FIX standard as close as possible.

Execution Report for Selling 1 Spread (for a credit of .80)

IB SMART Multileg Orders

SMART routing logic can split a combination order into individual legs and route the legs independently. For that reason, it is possible for partial executions to occur on multiple exchanges for each leg. For example, a 5 x 5 spread can execute with 5 contracts (for one leg) executing on the CBOE, and 2 contracts (for the other leg) executing on the AMEX and the remainder of 3 (for that same leg) executing on the ISE.

Customizable Settings for Execution Reports

Unsolicited Order Status Messages – By default this is turned off. When it is turned on, an order status message will be sent anytime there is a status change on a stop, stop limit, or trailing stop order. Without it turned on, a status message is only sent when the order is placed and when it is executed.

NOTE: Orders that are submitted using SMART could potentially be split and sent to two or more exchanges simultaneously. That would result in an acknowledgement that contains two or more exchanges in tag 100 and 207. The exchanges are separated by a comma. You would receive a separate execution report for the execution on each exchange.

Send Cancel Acknowledgments – By default this is turned off. When it is turned on, an additional, “Pending Cancel” message is sent. Without it turned on, only a cancel confirmation is sent.

Use LastMkt (tag 30) for Exchange – By default this is turned on. When it is turned on, tag 30 is used for the reporting of the exchange the last execution occurred on. Without it turned on, that information is sent in tag 100.

Trade Busts and Restatements

Occasionally, previously reported trades may be restated or busted. (see <http://www.interactivebrokers.com> for IB's bust policy and procedures). These messages are delivered through a FIX session using execution reports flagged with an ExecTransType (tag 20) of either 1 (for a bust) or 2 (for a restatement). For trade busts, the remainder of a trade confirm is included with the previously reported executionID and orderID. The values for cumQty, lastSize, lastShares, and AvgPx are adjusted to reflect the removal of that execution. Trade restatements are essentially the same, with the values for last price or size getting changed to a different value rather than zero.

Note: if an execution is busted, it does not automatically become a working order again.

Example: Trade Restatement

```
8=FIX.4.2 9=0307 35=8 34=008400 43=N 52=20060830-13:42:18 49=IB 56=acompid

```

Cancel/Replace Request

The Cancel/Replace Request is used to modify an existing order. Please see the table below for a list of the fields that can and cannot be modified. Required fields that cannot be changed must match the original order. Optional fields that cannot be changed must match the original order if they are included. If optional fields are not included, they are ignored and the modify could be acknowledged if there is no other reason to reject it.

* Any non-required tags sent on the first modification request, must be sent on all subsequent modification requests for that same order.

Tag	Field Name	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = G
21	HandInst	Y	
41	OrigClOrdID	Y	
37	OrderID	N	
11	ClOrdID	Y	
63	SettlemntTyp	N	Must match original order
55	Symbol	Y	Must match original order
48	SecurityID	N	Must match original order
22	IDSOURCE	N	Must match original order
54	Side	Y	Must match original order
38	OrderQty	Y	Can be modified
40	OrdType	Y	IB only supports changing a Limit order to a Market
44	Price	N	Can be modified
99	StopPx	N	Can be modified only if original order was STP or STP LMT
59	TimelnForce	N	IB supports changing Day orders to GTC and back
47	Rule80A	N	Must match original order
58	Text	N	
126	Expire Time	N	Can be changed on Good Til Time orders
432	Expire Date	N	Can be changed on Good Til Date orders
439	CarryFirm	N	Must match original order
440	ClearingAccount	N	Must match original order
6010	OrderReference	N	Can be modified
6037	OptionOrigin	N	Must match original order
6257	NoBarriers	N	Must match original order
6258	BarrierPrice	N	Can be changed
6259	BarrierStopPrice	N	Can be changed
6260	BarriertrailingAmt	N	Can be changed
6261	BarrierPriceDelimiter	N	Must match original order
6262	BarrierLimitPrice	N	Can be changed
6269	BarrierTrailingAmtUnit	N	Can be changed
	<i>Standard Trailer</i>	Y	

Example:

```
8=FIX.4.2 9=150 35=G 49=acompid 56=IB 34=43 52=20040728-17:11:34
11=B8ESP7J1Q0C_2 22=4 55=JPM 54=1 38=300 41=B8ESP7J1W0C_1 44=47.000000
40=2 21=1 100=n 10=231
```

Multileg Cancel/Replace Request

The Multileg Cancel/Replace Request is used to modify an existing multileg (combination) order. Please see the table below for a list of the fields that can and cannot be modified. Required fields that cannot be changed must match the original order. Optional fields that cannot be changed must match the original order if they are included. If optional fields are not

included, they are ignored and the modify could be acknowledged if there is no other reason to reject it.

Any non-required tags sent on the first modification request, must be sent on all subsequent modification requests for that same order.

Tag	Field Name	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = AC
21	HandlInst	Y	
41	OrigClOrdID	Y	
37	OrdID	N	
11	ClOrdID	Y	
63	SettlemntTyp	N	Must match original order
55	Symbol	Y	Must match original order
48	SecurityID	N	Must match original order
22	IDSource	N	Must match original order
54	Side	Y	Must match original order
38	OrderQty	Y	Can be modified
40	OrdType	Y	Must match original order
44	Price	N	Can be modified
99	StopPx	N	Can be modified only if original order was STP or STP LMT
100	ExDestination	N	Must match original order
59	TimeInForce	N	Must match original order GTC Combo orders not supported at this time
47	Rule80A	N	Must match original order
58	Text	N	
439	CarryFirm	N	Must match original order
440	ClearingAccount	N	Must match original order
6010	OrderReference	N	Can be modified
6037	OptionOrigin	N	Must match original order
	<i>Standard Trailer</i>	Y	

Example:

```
8=FIX.4.2 9=303 35=AC 49=acompid 56=IB 34=43 52=20040728-17:11:34
11=B8ESP7J1Q0C_2 22=4 55=JPM 54=1 38=10 59=0 15=USD 41=B8ESP7J1W0C_1
44=47.000000 40=2 21=1 204=0 207=ISE 10=231
```

Order Cancel Request

The order cancel request is used to transmit a cancel request for a pending order.

Tag	Field Name	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = F
11	ClOrdID	Y	
41	OrigClOrdID	Y	
55	Symbol	Y	
48	SecurityID	N	
22	IDSource	N	
54	Side	Y	Has to be identical to original side.
38	OrderQty	Y	
58	Text	N	Taken as a comment only.
	<i>Standard Trailer</i>	Y	

Order Cancel Reject

The Order Cancel Reject message is issued when a Cancel Request or Cancel / Replace Request cannot be honored.

Tag	Field Name	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = 9
37	OrderID	Y	
11	ClOrdID	Y	
41	OrigClOrdID	Y	
102	CxlRejReason	N	Provided
434	CxlRejResponseTo	Y	
58	Text	N	Reject reason (textual description).
	<i>Standard Trailer</i>	Y	

Order Status Request

The order status request message is used to request a status on a pending order or orders. IB only uses tag 11 in the request. When a request is made, IB responds with an Execution Report message for the requested order. A special value of "*" may be specified to refer to all the open orders of the customer. In response, IB sends a sequence of Execution Reports containing status information for all open orders. A message containing "*" in the ClOrdID field will terminate the sequence.

Tag	Field Name	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = H
11	ClOrdID	Y	This is the only field which is used by IB.
	<i>Standard Trailer</i>	Y	

Bulletin Messages

Your session can be configured to receive bulletin messages. Bulletin messages can contain system status and exchange status information.

Tag	Field Name	Req'd	Comments
	<i>Standard Header</i>	Y	MsgType = B
148	Headline	Y	The text of the Bulletin will be contained in this tag
6143	DailyNewID	Y	ID number associated with a particular bulletin
61	Urgency	Y	Urgency of message 0 = Normal 1 = Flash 2 = Background
207	Security Exchange	N	Used if message applies to a specific exchange
	<i>Standard Trailer</i>	Y	

Example:

```
8=FIX.4.2 9=0102 35=B 34=000003 43=N 52=20050504-13:54:48 49=IB 56=acompid
61=1 148=Important Bulletin Message 6143=42805703 207=ALL 10=096
```

Drop Copy Support

It is possible to configure a separate read-only “drop copy” session for the purpose of trade reporting.

This session can be linked to one or more trading sessions or accounts. The drop copy session is a standard FIX session which follows all of the standard session level rules including backfill.

In addition to the basic session level messages, the following application messages would be sent:

- Fill
- Partial Fill
- Trade Bust / Adjustment

Trade reports are delivered real-time as long as a valid drop copy FIX session is established. Trade reports are queued when the drop copy session is not connected.

Clients who wish to receive more detail than a standard drop copy session can be configured as a “drop copy plus” session type. In this read-only setup, IB will send copies of new order acknowledgements, modification acknowledgements, cancel acknowledgements, partial fills, fills, trade corrections, and trade busts.

If you are interested in setting up a drop-copy session, please contact the FIX integration group.

Appendix A: Notes on IB Implementation of FIX 4.3

Although IB has implemented many aspects of FIX 4.3, we cannot guarantee full FIX 4.3 compliance at this time. IB suggests the use of FIX 4.1 or 4.2 if possible.

Tag 20 (ExecTransType) is no longer used in FIX 4.3. This has been replaced with the following values in tag 150 (ExecType):

- H = Trade Cancel
- G = Trade Correct
- I = Order Status

Tag 150 (Exec Type) the values of 150=1 and 150=2 have been replaced with 150=F

The following order types in tag 40 (OrdType) were replaced with new time in force 59=7 (at the close):

- 40 = 5 (market on close)
- 40 = A (on close)
- 40 = B (limit on close)

Tag 47 (Rule80A): Has been replaced with the combined use of tags 528 (OrderCapacity) and 529 (OrderRestrictions).

Tag 204 (CustomerOrFirm) Has been replace with the use of tag 528 (OrderCapacity).

Tags 439 (ClearingFirm) & 440 (ClearingAccount): Have been replaced with:

- Tag 452 (PartyRole)
- Tag 448 (PartyID)
- Tag 447 (PartyIDSource)
- Tag 523 (PartySubID)

Tag 167 (Security Type): Values "FUT", "OPT", and "FOP" have been replaced with the use of the CFI Code in tag 461 (CFICode)

Appendix B: IB Implementation of Standard FIX Tags

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
1	Account	String	Needed for sessions which route orders to multiple IB accounts. The intended IB account number is used by default, although mapping can be implemented to replace the IB account designation with a unique user-specified value.	Account mnemonic as agreed between buy and sell sides, e.g. broker and institution or investor / intermediary and fund manager.	New Order Single New Order Multileg (combo)
6	AvgPx	Float	Per Standard	Calculated average price of all fills on this order.	Execution Report
7	BeginSeqNo	Int	Per Standard	Message sequence number of first message in range to be resent	Resend Request
8	BeginString	String	FIX 4.1 or FIX 4.2 are supported	Identifies beginning of new message and protocol version. ALWAYS FIRST FIELD IN MESSAGE. (Always unencrypted) Valid values: FIX.4.2	Standard Header
9	Body Length	Int	Message length must be 1 to 4 characters long	Message length, in bytes, forward to the CheckSum field. ALWAYS SECOND FIELD IN MESSAGE. (Always unencrypted)	Standard Header
10	Checksum	String	Per Standard	Three byte, simple checksum (See Appendix B of 4.2 manual for description). ALWAYS LAST FIELD IN MESSAGE; i.e. serves, with the trailing <SOH>, as the end-of-message delimiter. Always defined as three characters. (Always unencrypted)	Standard Trailer
11	C1OrdID	String	Per Standard	Unique identifier for Order as assigned by order routing firm. Uniqueness must be guaranteed within a single trading day. Firms which electronically submit multi-day orders should consider embedding a date within the C1OrdID field to assure uniqueness across days.	New Order- Single, Execution Report, Cancel, Cancel Replace, Cancel Reject
14	CumQty	Int	Per Standard	Total number of shares filled. (Prior to FIX 4.2 this field was of type int)	Execution Report
15	Currency	Currency	Valid Values: USD = US Dollar AUD = Australian Dollar CAD = Canadian Dollar CHF = Swiss Franc EUR = Euros GBP = British Pound HKD = Hong Kong \$ JPY = Japanese Yen	Identifies currency used for price. Absence of this field is interpreted as the default for the security. It is recommended that systems provide the currency value whenever possible. See Fix 4.2 Manual Appendix A: Valid Currency Codes for information on obtaining valid values.	Execution Report
16	EndSeqNo	Int	EndSeqNo = "0" is currently not supported by IB. A specific sequence number must be specified.	Message sequence number of last message in range to be resent. If request is for a single message BeginSeqNo = EndSeqNo. If request is for all messages subsequent to a particular message, EndSeqNo = "0" (representing infinity).	Resend
17	ExecID	String	Per Standard	Unique identifier of execution message as assigned by broker (will be 0 (zero) for ExecTransType=3 (Status)). Uniqueness must be guaranteed within a single trading day or the life of a multi-day order. Firms which accept multi-day orders should consider embedding a date within the ExecID field to assure uniqueness across days. (Prior to FIX 4.1 this field was of type int)	Execution Report

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
18	ExecInst	Multiple Value String	<p>IB Supports the following Values:</p> <p>P = Market Peg R = Primary peg (primary market – buy at bid/sell at offer) G = All or None W = Peg to VWAP a = Trailing Stop Peg (FIX 4.4) s = Peg to stock (IB Custom value) e =</p>	<p>Instructions for order handling on exchange trading floor. If more than one instruction is applicable to an order, this field can contain multiple instructions separated by space.</p> <p>Valid values: 1 = Not held 2 = Work 3 = Go along 4 = Over the day 5 = Held 6 = Participate don't initiate 7 = Strict scale 8 = Try to scale 9 = Stay on bidside 0 = Stay on offerside A = No cross (cross is forbidden) B = OK to cross C = Call first D = Percent of volume "(indicates that the sender does not want to be all of the volume on the floor vs. a specific percentage)" E = Do not increase - DNI F = Do not reduce - DNR G = All or none - AON I = Institutions only L = Last peg (last sale) M = Mid-price peg (midprice of inside quote) N = Non-negotiable O = Opening peg P = Market peg R = Primary peg (primary market - buy at bid/sell at offer) S = Suspend T = Fixed Peg to Local best bid or offer at time of order U = Customer Display Instruction (Rule11Ac1-1/4) V = Netting (for Forex) W = Peg to VWAP</p>	New Order-Single
19	ExecRefID	String	Provided for Cancel and Correct ExecTransType messages	Reference identifier used with Cancel and Correct transaction types. (Prior to FIX 4.1 this field was of type int)	Execution Report
20	ExecTransType	Char	Per Standard	<p>Identifies transaction type</p> <p>Valid values: 0 = New 1 = Cancel 2 = Correct 3 = Status</p>	Execution Report
21	Hand1Inst	Char	<p>The only supported value for IB is:</p> <p>2 = Automated execution order, public, Broker intervention OK.</p>	<p>Instructions for order handling on Broker trading floor</p> <p>Valid values: 1 = Automated execution order, private, no Broker intervention 2 = Automated execution order, public, Broker intervention OK 3 = Manual order, best execution</p>	Order, Cancel, Replace

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
22	IDSource	String	IB supports 1=CUSIP 4=ISIN	Identifies class of alternative SecurityID Valid values: 1 = CUSIP 2 = SEDOL 3 = QUIK 4 = ISIN number 5 = RIC code 6 = ISO Currency Code 7 = ISO Country Code 8 = Exchange Symbol 9 = Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format) 100+ are reserved for private security identifications	Order, Execution Report, Cancel, Replace
30	LastMkt	Exchange	Per Standard	Market of execution for last fill. Valid Values: See Appendix C of Fix 4.2 Manual	Execution Report
31	LastPx	Float	Per Standard	Price of this (last) fill. Field not required for ExecTransType = 3 (Status)	Execution Report
32	LastShares	Qty	Per Standard	Quantity of shares bought/sold on this (last) fill. Field not required for ExecTransType = 3 (Status) (Prior to FIX 4.2 this field was of type int)	Execution Report
34	MsgSeqNum	Int	Per Standard	Integer message sequence number.	Standard Header

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
35	MsgType	Int	<p>IB Supports the following values:</p> <p>0 = Heartbeat 1 = Test Request 2 = Resend Request 3 = Reject 4 = Sequence Reset 5 = Logout 8 = Execution Report 9 = Order Cancel Reject A = Logon D = Order Single F = Order Cancel Request G = Order Cancel/ Replace Req H = Order Status Request B = Bulletin Message AB = New Order- Multileg AC = Cancel Replace – Multileg</p>	<p>Defines message type. ALWAYS THIRD FIELD IN MESSAGE. (Always unencrypted) Note: A "U" as the first character in the MsgType field (i.e. U1, U2, etc) indicates that the message format is privately defined between the sender and receiver. Valid values: *** Note the use of lower case letters *** 0 = Heartbeat 1 = Test Request 2 = Resend Request 3 = Reject 4 = Sequence Reset 5 = Logout 6 = Indication of Interest 7 = Advertisement 8 = Execution Report 9 = Order Cancel Reject A = Logon B = News C = Email D = Order – Single E = Order – List F = Order Cancel Request G= Order Cancel/Replace Request H= Order Status Request J = Allocation K = List Cancel Request L = List Execute M = List Status Request N = List Status P = Allocation ACK Q = Don't Know Trade (DK) R = Quote Request S = Quote T = Settlement Instructions V = Market Data Request W = Market Data-Snapshot/Full Refresh X = Market Data-Incremental Refresh Y = Market Data Request Reject Z = Quote Cancel a = Quote Status Request b = Quote Acknowledgement c = Security Definition Request d = Security Definition e = Security Status Request f = Security Status g = Trading Session Status Request h = Trading Session Status i = Mass Quote j = Business Message Reject k = Bid Request l = Bid Response (lowercase L) m = List Strike Price</p>	Standard Header
36	NewSeqNo	Int	Per Standard	New sequence number	Sequence Reset
37	OrderID	String	* For combo orders, an additional value will be added to the end of the order ID to identify the leg of the execution in the event of a partial execution on a SMART routed combo order	Unique identifier for Order as assigned by broker. Uniqueness must be guaranteed within a single trading day. Firms which accept multi-day orders should consider embedding a date within the OrderID field to assure uniqueness across days.	Execution Report, Cancel/Replace Request, Order Cancel Reject
38	OrderQty	Qty	Per Standard	Number of shares ordered	New Order-Single, Execution Report, Cancel, Cancel Replace

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In

50	SenderSubID	String	Per Standard	Assigned value used to identify specific message originator (desk, trader, etc.)	Standard Header
52	SendingTime	UTC Time Stamp	Per Standard	Time of message transmission (always expressed in UTC (Universal Time Coordinated, also known as "GMT"))	Standard Header

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
54	Side	Char	<p>IB supports the following values:</p> <p>1 = Buy 2 = Sell 3 = BuyMinus (interpreted as buy) 4 = SellPlus (interpreted as sell) 5 = Sell Short 6 = Sell Short Exempt</p>	<p>Side of order</p> <p>Valid values:</p> <p>1 = Buy 2 = Sell 3 = Buy minus 4 = Sell plus 5 = Sell short 6 = Sell short exempt 7 = Undisclosed (valid for IOI and List Order messages only) 8 = Cross (orders where counterparty is an exchange, valid for all messages except IOIs) 9 = Cross short</p>	New Order-Single, Execution Report, Cancel/Replace Request, Order Cancel Request
55	Symbol	String	<p>For Options, underlying symbol should be used as a default. If you wish to use the option class symbol, your session needs to be configured to do so. Please contact IB's FIX integration department.</p>	Ticker Symbol	New Order-Single, Execution Report, Cancel/Replace Request, Order Cancel Request
56	TargetCompID	String	<p>Default is "IB"</p> <p>If required the value can be determined by the client, please notify FIX Intergration Group.</p>	Assigned value used to identify receiving firm	Standard Header
57	TargetSubID	String	Per Standard	Assigned value used to identify specific individual or unit intended to receive message. "ADMIN" reserved for administrative messages not intended for a specific user.	Standard Header
58	Text	String	<p>Messages returned from IB depend on the message type. See the various tables in the Application Messages documentation section</p>	Free format text string (Note: this field does not have a specified maximum length)	Reject, Sequence Reset, New Order-Single, Execution Report, order Cancel Request, Order Cancel Reject
59	TimeInForce	Char	<p>If specified, the valid values are</p> <p>0 = Day 1 = GTC 2 = OPG 3 = IOC 4 = Fill or Kill (FOK) 6 = GTD (If used, EITHER tag 432 or tag 126 can be used. NOT both.) 7 = At the Closing 8 = Auction</p>	<p>Specifies how long the order remains in effect. Absence of this field is interpreted as DAY.</p> <p>Valid values:</p> <p>0 = Day 1 = Good Till Cancel (GTC) 2 = At the Opening (OPG) 3 = Immediate or Cancel (OC) 4 = Fill or Kill (FOK) 5 = Good Till Crossing (GTX) 6 = Good Till Date 7 = At the Closing 8 = Auction (AUC)</p>	New Order-Single, Execution Report, Cancel/Replace Request
60	TransactTime	UTC Time Stamp	Per Standard	Time of execution/order creation (expressed in UTC (Universal Time Coordinated, also known as "GMT"))	Execution Reports,
61	Urgency	Char	Used in bulletin messages.	<p>Urgency of message</p> <p>0 = Normal 1 = Flash 2 = Background</p>	Bulletins

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
63	SettlmntTyp	Char	IB supports the following value only: 0 = Regular	Indicates order settlement period. Absence of this field is interpreted as Regular. Regular is defined as the default settlement period for the particular security on the exchange of execution. Valid values: 0 = Regular 1 = Cash 2 = Next Day 3 = T+2 4 = T+3 5 = T+4 6 = Future 7 = When Issued 8 = Sellers Option 9 = T+ 5	Execution Reports, Cancel/Replace Request
77	OpenClose renamed PositionEffect (FIX 4.3 +)	Char	For options only. Valid Values: O=Open C=Close	Indicates whether the resulting position after a trade should be an opening position or closing position. Used for omnibus accounting - where accounts are held on a gross basis instead of being netted together. Valid Values: O = Open C = Close R = Rolled (FIX 4.3) F = FIFO (FIX 4.3)	New Order-Single
97	PossResend	Boolean	Per Standard	Indicates that message may contain information that has been sent under another sequence number. Valid Values: Y=Possible resend N=Original transmission	Standard Header
98	EncryptMethod	Int	IB does not currently support encryption. Valid value = 0	Method of encryption. Valid values: 0 = None / other 1 = PKCS (proprietary) 2 = DES (ECB mode) 3 = PKCS/DES (proprietary) 4 = PGP/DES (defunct) 5 = PGP/DES-MD5 (see app note on FIX web site) 6 = PEM/DES-MD5 (see app note on FIX web site)	Logon
99	StopPx	Price	Price per share. Valid Values: 0 - 99999999.9999 (number of decimal places may vary and not limited to four). Specify the trailing amount in the StopPx field when creating a Trailing Stop order.	Price per share	New Order-Single, Execution Report, Cancel/Replace Request
100	ExDestination	Exchange	If "SMART" is used, either tag 207 or tag 15 must be used as well. For options, IB uses underlying symbol	Execution destination as defined by institution when order is entered. See Appendix C of Fix 4.2 Manual	New Order-Single, Execution Report,
102	CxlRejReason	Int	Per Standard	Code to identify reason for cancel rejection. Valid values: 0 = Too late to cancel 1 = Unknown order 2 = Broker Option 3 = Order already in Pending Cancel or Pending Replace status	Order Cancel Reject

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
103	OrdRejReason	Int	Supported Values: 0 = Broker Option (default if omitted) 3 = Order exceeds limit	Code to identify reason for order rejection. Valid values: 0 = Broker option 1 = Unknown symbol 2 = Exchange closed 3 = Order exceeds limit 4 = Too late to enter 5 = Unknown Order 6 = Duplicate Order (e.g. dupe ClOrdID) 7 = Duplicate of a verbally communicated order 8 = Stale Order	Execution Reports
108	HeartBtInt	Int	A heartbeat interval of 30 seconds is suggested. The initiator may set it to any value, but the acceptor (IB) may override this interval when necessary. That means that the initiator has to be prepared to receive and respond to Test Request and Heartbeat messages in any case.	Heartbeat interval (seconds)	Logon
110	MinQty	Qty	Per Standard	Minimum quantity of an order to be executed	New Order Single
111	MaxFloor	Qty	Per Standard	Maximum number of shares within an order to be shown on the exchange floor at any given time. (Prior to FIX 4.2 this field was of type int)	New Order-Single
112	TestReqID	String	A timestamp string is suggested for TestReqID	Identifier included in Test Request message to be returned in resulting Heartbeat	Test Request
114			Valid codes = N or Y. Required for short sale orders involving U.S. equity securities ("stocks"). If customer uses IB as its executing broker but uses a clearing broker other than IB (a "Non-Cleared Customer") and Tag 6086 contains the value "1" or "2", this Tag 114 must contain the value "N". IB will not accept a short sale order if a Non-Cleared Customer enters the value Y in Tag 114. If customer uses IB as its executing broker and clearing broker (a "Cleared Customer"), then such Cleared Customer is not required to populate this field.	Indicates whether the broker is to locate the stock in conjunction with a short sale order. Valid Values: Y = Indicates the broker is responsible for locating the stock. N = Indicates the broker is not required to locate.	New Order - Single
122	OrigSendingTime	UTC Time Stamp	Per Standard	Original time of message transmission (always expressed in UTC (Universal Time Coordinated, also known as "GMT") when transmitting orders as the result of a resend request.	Message Header
123	GapFillFlag	Boolean	Per Standard	Indicates that the Sequence Reset message is replacing administrative or application messages which will not be resent. Valid values: Y = Gap Fill message, MsgSeqNum field valid N = Sequence Reset, ignore MsgSeqNum	Sequence Reset
126	ExpireTime	UTCTimeStamp	Specify the date and time in the format below: yyyymmdd-hh:mm:ss	Time/Date of order expiration (always expressed in UTC (Universal Time Coordinated, also known as "GMT")	New Order-Single

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
141	ResetSeqNumFlag	Boolean	This field is required when a new session is to be opened.	Indicates that the both sides of the FIX session should reset sequence numbers. Valid values: Y = Yes, reset sequence numbers N = No	Logon
148	Headline	Text	Used in bulletin messages, 35=B	The headline of a news message	Bulletin
150	ExecType	Char	<p>IB supports the following values:</p> <p>0 = New 1 = Partial Fill 2 = Fill 4 = Canceled 5 = Replace 6 = Pending Cancel/Replace A = Pending New 8 = Rejected C = Expired D = Restated E = Pending Replace</p>	<p>Describes the specific ExecutionRpt (i.e. Pending Cancel) while OrdStatus will always identify the current order status (i.e. Partially Filled)</p> <p>Valid values: 0 = New 1 = Partial fill 2 = Fill 3 = Done for day 4 = Canceled 5 = Replace 6 = Pending Cancel (e.g. result of Order Cancel Request) 7 = Stopped 8 = Rejected 9 = Suspended A = Pending New B = Calculated C = Expired D = Restated (ExecutionRpt sent unsolicited by sellside, with ExecRestatementReason set) E = Pending Replace (e.g. result of Order Cancel/Replace Request)</p>	Execution Reports
151	Leaves Qty	Qty	Per Standard	Amount of shares open for further execution. If the OrdStatus is Canceled, DoneForTheDay, Expired, Calculated, or Rejected (in which case the order is no longer active) then LeavesQty could be 0, otherwise LeavesQty = OrderQty - CumQty. (Prior to FIX 4.2 this field was of type int)	Execution Reports

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
167	SecurityType	String	<p>CS = Common stock, can also be sent as STK. FUT = Future OPT = Option, except for options on futures. FOP = Options on Futures WAR = Warrant MLEG = Multi-leg component, can also be sent as MULTILEG. CASH = Foreign exchange. BOND = Bonds CFD = Contract for difference CMDTY = Spot</p>	<p>Indicates type of security (ISITC spec) Valid values: BA = Bankers Acceptance CB = Convertible Bond (Note not part of ISITC spec) CD = Certificate Of Deposit CMO = Collateralize Mortgage Obligation CORP = Corporate Bond CP = Commercial Paper CPP = Corporate Private Placement CS = Common Stock FHA = Federal Housing Authority FHL = Federal Home Loan FN = Federal National Mortgage Association FOR = Foreign Exchange Contract FUT = Future GN = Government National Mortgage Association GOVT = Treasuries + Agency Debenture IET Mortgage IOETTE MF = Mutual Fund MIO = Mortgage Interest Only MPO = Mortgage Principal Only MPP = Mortgage Private Placement MPT = Miscellaneous Pass-Thru MUNI = Municipal Bond NONE = No ISITC Security Type OPT = Option PS = Preferred Stock RP = Repurchase Agreement RVRP = Reverse Repurchase Agreement SL = Student Loan Marketing Association TD = Time Deposit USTB = US Treasury Bill WAR = Warrant ZOO = Cats, Tigers & Lions (a real code Treasury Receipts)</p>	New Order-Single, Execution Reports
168	EffectiveTime	UTCTimeStamp	To be entered in the format: yyyyymmdd-hh:mm:ss	Time the details within the message should take effect (always expressed in UTC (Universal Time Coordinated, also known as "GMT"))	New Order-Single
200	MaturityMonthYear	month-year	Per Standard	Month and Year of the maturity for SecurityType=FUT or SecurityType=OPT Format: YYYYMM (i.e. 199903)	
201	PutOrCall	Int	Per Standard	Indicates whether an Option is for a put or call Valid values: 0 = Put 1 = Call	New Order-Single, Execution Report
202	Strike Price	Price	Per Standard	The strike price for an option	
204	CustomerOrFirm	Int	Required for Options Orders Valid Values: 0 = Customer 1 = Firm	Used for options when delivering the order to an execution system/exchange to specify if the order is for a customer or the firm placing the order itself. Valid values: 0 = Customer 1 = Firm	
205	MaturityDay	Day-of-month	Per Standard. Could be zero padded (e.g. 5 th of the month can be represented as both 5 and 05).	Day of month used in conjunction with MaturityMonthYear (tag 200) to specify Maturity Date for OPT or FUT Valid Values: 1-31	
207	SecurityExchange	Exchange	If "SMART" is selected in tag 100, tag 207 can be used to specify the primary exchange of the product	Market used to help identify a security. Valid Values: See Fix 4.2 manual Appendix C:	New Order-Single, Execution Report,
211	PegDifference	PriceOffset	Per Standard	Amount (signed) added to the price of the peg for a pegged order	

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
231	ContractMultiplier	Float	This tag should be used to identify option contracts if the underlying symbol is used in tag 55	Specifies the ratio or multiply factor to convert from contracts to shares (e.g. 1.0, 100, 1000, etc). Applicable For Fixed Income, Convertible Bonds, Derivatives, etc. Note: If used, quantities should be expressed in the "nominal" (e.g. contracts vs. shares) amount.	
388	DiscretionInst	Char	IB Currently supports: 0 = Related to displayed price	Code to identify the price a DiscretionOffset is related to and should be mathematically added to. Valid Values: 0 = Related to display price 1 = Related to market price 2 = Related to primary price 3 = Related to local primary price 4 = Related to midpoint price 5 = Related to last trade price	
389	DiscretionOffset	PriceOffset	Per Standard	Amount (signed) added to the "related to" price specified via DiscretionInst.	
432	ExpireDate	Local Mkt Date	Per Standard	Date of order expiration (last day the order can trade), always expressed in terms of the local market date. The time at which the order expires is determined by the local market's business practices	
434	CxlRejResponseTo	Int	Per Standard	Identifies the type of request that a cancel replace request is in response to. Valid Values: 1 = Order Cancel Request 2 = Order Cancel/Replace Request	Cancel Reject

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
439	Clearing Firm	String	<p>Clearing Firm Identifier. This tag supports multiple 'giveups' per customer: The customer may have multiple give-up's per exchange. Tag #439 (CarryFirm) is used to specify the settling firm the customer wants to use.</p> <p>There are 3 basic cases: 1. When no clearing firm identifier for the exchange/contract type is listed in the customer's clearing account information file: The Order is rejected regardless of value of CarryFirm 2. When one clearing firm identifier for a exchange/contract type is listed in the customer's clearing account information file: If CarryFirm is NOT specified in the Fix message by the customer, the entry in the customer's clearing account information is used. If CarryFirm is specified, the value of CarryFirm must match that in the customer's clearing account information otherwise order is rejected 3. When a multiple clearing firm identifier for the exchange/contract type is set-up in the customer's clearing account information file: If CarryFirm is NOT specified in the Fix message by the customer, the order is rejected. If CarryFirm is specified, the value of CarryFirm must match one of the entries for this exchange/contract type combination in the customer's clearing account information, otherwise order is rejected).</p>	Firm that will clear the trade. Used if different than the executing firm.	New Order, Execution Report
440	ClearingAccount	String	Extra user-defined required field for Non-IB Clearing CTCL Accounts when placing futures and futures options orders.	Supplemental accounting information forwarded to clearing house/ firm	New Order, Execution Report
442	MultilegReportingType	Char	IB Uses this tag in addition to the custom tag 6013 for Combo order execution reports. If 442=2 then tag 654 will be included as well	Used to indicate what an Execution Report represents (e.g. used with multi-leg securities, such as option strategies, spreads, etc.). Valid Values: 1 = Single Security (default if not specified) 2 = Individual leg of a multi-leg security 3 = Multi-leg security	Execution Report
461	CFICode	String	Per Standard	Indicates the type of security using ISO 10962 standard, Classification of Financial Instruments (CFI code) values. ISO 10962 is maintained by ANNA (Association of National Numbering Agencies) acting as Registration Authority.	

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
528	OrderCapacity	Char	Valid Values: A = Agency P = Principal	Designates the capacity of the Firm placing the order. Valid values: A=Agency G=Proprietary I=Individual P=Principal R=Riskless Principal W=Agent for another member (as of FIX 4.3, this field replaced Rule80A (tag 47) --used in conjunction with OrderRestrictions (529) field)	New Order
529	Order Restrictions	MultipleValueString	Valid Values: 1 = Program Trade 2 = Index Arbitrage 3 =Non-Index Arb. 4 = Competing Market Maker 5 = Actjng as Market Maker of Specialist in the underlying security of a derivative security	Restrictions associated with an order. If more than one restriction is applicable to an order, this field can contain multiple instructions separated by space Valid values: 1 = Program Trade 2 = Index Arbitrage 3 = Non-Index Arbitrage 4 = Competing Market Maker 5 = Acting as Market Maker or Specialist in the security 6 = Acting as Market Maker or Specialist in the underlying security of a derivative security 7 = Foreign Entity (of foreign governmnet or regulatory jurisdiction) 8 = External Market Participant 9 = External Inter-connected Market Linkage A = Riskless Arbitrage	New Order
541	MaturityDate	Date	Format: yyyymmdd ** Date should reflect the last trading day of the contract. (typically the Friday before expiration Saturday)	Used in place of tag 200 to identify option contracts that may be ambiguous due to listing of weekly and quarterly options within that same month and strike.	New Order (opt/fut/war)
555	NoLegs	NumInGroup	Per Standard	Number of InstrumentLeg repeating group instances.	New Order-Multileg
564	LegPositionEffect	Char	Per Standard	PositionEffect for leg of a multileg See PositionEffect (77) field for description	New Order-Multileg
583	C1OrdLinkID	Srring	Used for OCA orders. Must contain the string IBOCAGROUP Followed with a name for that OCA group Example: IBOCAGROUP group1	Permits order originators to tie together groups of orders in which trades resulting from orders are associated for a specific purpose, for example the calculation of average execution price for a customer or to associate lists submitted to a broker as waves of a larger program trade	New Order - Single
600	LegSymbol	String	Per Standard	Multileg instrument's individual security's Symbol. See Symbol (55) field for description	New Order-Multileg
608	LegCFIcode	String	Per Standard	Multileg instrument's individual security's CFIcode. See CFIcode (461) field for description	New Order-Multileg
609	LegSecurityType	String	Per Standard	Multileg instrument's individual security's SecurityType. See SecurityType (167) field for description	New Order Multileg

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
610	LegMaturityMonthYear	month-year	Per Standard	Multileg instrument's individual security's MaturityMonthYear. See MaturityMonthYear (200) field for description	New Order-Multileg
611	LegMaturityDate	Date	Per Standard	Identifies Multileg instrument's individual security's Maturity date in yyyyymmdd format.	New Order-Multileg
612	LegStrikePrice	Price	Per Standard	Multileg instrument's individual security's StrikePrice. See StrikePrice (202) field for description	New Order-Multileg
614	LegContractMultiplier	Float	Per Standard	Multileg instrument's individual security's ContractMultiplier. See ContractMultiplier (231) field for description	New Order-Multileg
616	LegSecurityExchange	Exchange	Per Standard	Multileg instrument's security exchange designation used for product identification	
623	LegRatioQty	Float	Per Standard	The ratio of quantity for this individual leg relative to the entire multileg security	New Order-Multileg
624	LegSide	Char	Per Standard	The side of this individual leg (multileg security). cr See Side (54) field for description	New Order-Multileg
636	WorkingIndicator	Boolean	Per Standard	Indicates if the order is currently being worked. Applicable only for OrdStatus = "New". For open outcry markets this indicates that the order is being worked in the crowd. For electronic markets it indicates that the order has transitioned from a contingent order to a market order. Valid values: Y = Order is currently being worked N = Order has been accepted but not yet in a working state	Execution Reports
654	LegRefID	String	Used to identify the leg of a combination order reported on an execution report. Valid Values 1 = Leg 1 2 = Leg 2 3 = Leg 3 4 = Etc.	Unique identifier for a specific leg. (combo orders)	Execution Reports
847	TargetStrategyname	String	Used for IB Algo Orders Valid Values: <ul style="list-style-type: none"> • ArrivalPx • PctVol • Vwap • BalancelmpactRisk • MinImpact 	Note: standard FIX implementation requires the value to be numerical with values 1000+ reserved and available for bi-lateral agreed upon user defined values.	New Order (IB Algos)
849	ParticipationRate	Percent	Used for IB Algo Order Percentage in decimal form.	Volume limit (i.e. do not be more than this percent of market value)	New Order (IB Algos)

Tag #	Tag Name	Data Type	IB Implementation	FIX Standard Definition	Used In
1688	ShortSaleExemptionReason	Int	<p>Per Standard, except where noted.</p> <p>Valid Values: 0 = Exemption Reason Unknown 1 = Incoming Short Sale Exempt 2 = Above NBB (B/D Provision)* 3 = Delayed Delivery 4 = Odd-Lot** 5 = Domestic Arbitrage 6 = International Arbitrage 7 = Underwriter or Syndicate Distribution 8 = Riskless Principal*** 9 = VWAP***</p> <p>* Value 2 is not supported. ** Only allowed for odd lot size orders. *** Only supported for done away orders</p>	<p>Indicates the reason a short sale order is exempted from applicable regulation (e.g. Reg SHO addendum (b)(1) in the U.S.).</p> <p>Valid Values: 0 = Exemption Reason Unknown 1 = Incoming Short Sale Exempt 2 = Above NBB (B/D Provision) 3 = Delayed Delivery 4 = Odd-Lot 5 = Domestic Arbitrage 6 = International Arbitrage 7 = Underwriter or Syndicate Distribution 8 = Riskless Principal 9 = VWAP</p>	New Order (Short Sale Exempt)
1689	LegShortSaleExemptionReason	Int	<p>Per Standard</p> <p>Valid Values: use the same values as ShortSaleExemptionReason.</p>	<p>Indicates the reason a short sale order is exempted from applicable regulation (e.g. Reg SHO addendum (b)(1) in the U.S.).</p> <p>Valid Values: use the same values as ShortSaleExemptionReason.</p>	New Order – Multileg (Short Sale Exempt Leg)

Appendix C: Custom IB Tags

Tag #	Tag Name	Data Type	IB Implementation	Used In
5700	LocateBroker	String	<p>Tag 5700 is required for short sale orders involving U.S. stocks to indicate the present location of the shares that are to be delivered in connection with customer's short sale order.</p> <p>Customers who use IB as their executing broker only, must enter a valid Market Participant Identifier ("MPID") for the clearing broker or other custodian with whom the customer has arranged to borrow the shares that are to be delivered in connection with customer's short sale order.</p> <p>A list of MPID's is located at: http://www.interactivebrokers.com/MPIDlist. If you do not see a valid MPID for your clearing broker or custodian, you must send an e-mail to: proserve@interactivebrokers.com. (Note: This field will be automatically populated with the MPID "IBKR" for those customers who use IB as both their executing broker and clearing broker).</p> <p>*If more than one MPID needs to be included, you can list more than one using a comma (,) as a delimiter.</p>	New Order
5957	NoStrategyParameters	Integer	Used for IB Algo Orders	New Order (IB Algos)
5958	StrategyParameterName	String	Used for IB Algo Orders Valid Values: riskAversion pctVol forceCompletion	New Order (IB Algos)
5960	StrategyParameterValue	String	Used for IB Algo Orders Valid Values: Aggressive Passive Neutral Get Done	New Order (IB Algos)
6004	Exchange			Execution Report
6008	ContractID			New Order
6009	ConQPath	String	Contains contract definition data. Not delivered in most FIX sessions	Execution Report
6010	Order Reference Account	String	Extra user-defined field for additional identification for customer orders.	New Order-Single
6013	ComboLegInformation	Multiple Value String (colon : delimited)	<p>Defines the leg of a combination order in an execution report. The format is two columns separated by a colon (:) The first column represents the leg number for the execution report. -1 represents the spread itself. 0 represents the first leg, 1 represents the second leg, etc. The second column represents the total number of legs. For example, an execution report for the second leg or a two leg spread would have the following value.</p> <p>1:2</p> <p>The execution report for the spread itself on a two leg spread would be.</p> <p>-1:2</p>	Execution Report

Tag #	Tag Name	Data Type	IB Implementation	Used In
6035	IBLocalSymbol	String	<p>For US Equity Options with multiple series. Refers to the contract symbol on the primary exchange where the contract is traded. In case of US equity options it refers to the OCC symbol of the option contract. The use of this field is optional when specifying a contract.</p> <p>The OCC symbol should be entered in a 5 character format. If the Option Class symbol is less than 3 characters the remainder should be entered as spaces.</p> <p>For Example:</p> <p>IBM Jan05 30 call = IBZAF (no spaces) GE Jan05 35 call = GE AG (1 space) F Jan05 15 call = F AC (2 spaces)</p> <p>If "IBLocalSymbol" is included in the contract specification then it is used the following way: 1.) If the contract specification is ambiguous, IBLocalSymbol is used to resolve the ambiguity. If IBLocalSymbol does not match any of the ambiguous candidates, the order is rejected with "ambiguous contract". 2.) If the contract specification is not ambiguous, IBLocalSymbol is checked against the IB contract database. In case of a mismatch the order is rejected with "incorrect local symbol".</p>	New Order-Single
6058	TradingClass	String	<p>Used for product identification for Options only. This represents the option "class"</p> <p>Example:</p> <p>The underlying symbol for Microsoft is "MSFT" The option class symbol for Microsoft is "MSQ"</p>	New Order-Single
6075	IssueDate			
6076	BDSymbol			
6077	BDFlag			
6086	ShortSaleRule	Int	<p>The valid values are either "1" or "2".</p> <p>The value "1" may only be used by an IB customer who uses IB as its executing broker only and does not use IB as its clearing broker (a "Non-Clearing Customer"). The value "1" may only be used by a Non-Clearing Customer who has arranged with its clearing broker or custody agent (as designated in Tag 439 on the order) to borrow the shares that are required to be delivered in connection with the short sale order.</p> <p>The value "2" may only be used by a Non-Clearing Customer who has arranged with a clearing broker or custody agent other than its usual clearing broker or custody agent to borrow the shares that are required to be delivered in connection with the short sale order, i.e. a party other than the clearing firm designated in Tag 439 on the order. If a Non-Clearing customer uses the value "2" for this Tag 6086, the Non-Clearing Customer must also use in combination Tags 114 (with the value "N") and 5700 (with the clearing broker's or custody agent's MPID).</p> <p>An IB customer who executes and clears through IB (a "Cleared Customer") may not use this Tag 6086.</p>	New Order

Tag #	Tag Name	Data Type	IB Implementation	Used In
6107	ParentClientID	String	Used to created orders that are contingent upon the execution of another order. Child orders must specify the clientOrderID of the parent order. Child orders are not submitted until the parent order fills.	New-Order Single
6115	Trigger Method		Sets the Stop Trigger Method for stops, stop limits, and trailing stops.	New Order
6116	IgnoreRegularTradingHours	Int	Setting to allow for the triggering of stop orders outside regular market hours. Valid Values: 1 = Allow triggering outside of regular trading hours If tag is omitted, triggering will be limited to regular trading hours.	New Order
6122	OptionAcct	String	Specifies the order capacity. This tag take precedence over all other order capacity tags. Valid Values: c = Customer f = Firm m = Market Maker b = Broker Dealer n = away Market Maker y = Specialist in Underlying	New Order
6123	ConditionConID	String	IB's internal contract ID	New Order-Single
6124	ConditionExchange	Exchange	The condition needs to be met based upon market data from this exchange	New Order-Single
6125	ConditionriggerPrice	Price	The trigger price for the condition	New Order-Single
6126	ConditionOperand	String	The condition operation Valid Values: <= >=	New Order-Single
6127	ConditionTriggerMethod	Int	Trigger method for the condition Valid Values: 1 = Double Bid/Ask 2 = Last 3 = Double Last 4 = Bid/Ask	New Order-Single
6128	ConditionIgnoreRegularTradingHours	Int	Setting to allow for the triggering of conditional orders outside regular market hours. Valid Values: 1 = Allow triggering outside of regular trading hours If tag is omitted, triggering will be limited to regular trading hours.	New Order-Single
6136	Condition List Size	float	The number of conditions in the message	New Order-Single
6137	ConditionLogicOperantBinder	Char	The logical binder used with multiple conditions. a = and o = or n = non defined (should only be used with the last condition in a list)	New Order-Single
6143	DailyNewID	Char	ID number associated with a particular bulletin	Bulletin

Tag #	Tag Name	Data Type	IB Implementation	Used In
6152	StockRangeLower	Price	Used in conjunction with the custom Tag 18=s (peg to stock) function. This tag specifies the lower range of the underlying range for a delta order. If the underlying stock goes below this value, the order is canceled	New Order-Single
6153	StockRangeUpper	Price	Used in conjunction with the custom Tag 18=s (peg to stock) function. This tag specifies the lower range of the underlying range for a delta order. If the underlying stock goes above this value, the order is canceled	New Order-Single
6154	Delta	Float	Used in conjunction with the custom Tag 18=s (peg to stock) function. This tag specifies the delta to be used in the order. Value must be between -100 and 100. (the sign is ignored)	New Order-Single
6165	ConditionUnderlying	String	Underlying symbol of the product upon which the condition exists.	New Order-Single
6166	ConditionStrike	Price	The strike price of the security if it is an option	New Order-Single
6167	ConditionRight	Char	The right of an option (call or put) Valid Values: C = Call P = Put	New Order-Single
6168	ConditionExpiry	Month year	The expiration year and month (for futures or options) Format: (yyyyymm)	New Order-Single
6169	ConditionSecurityType	String	Specifies the security type in a conditional order	New Order-Single
6170	ConditionLocalSymbol	String	Specifies the IB Local Symbol of the product you are making an order conditional upon	New Order-Single
6173	DiscretionaryType	Int	For use with the P.I.P. order type on the BOX. Specifies the Auction Strategy for the P.I.P. order 1 = Discretionary Matching 2 = Discretionary Improving 3 = Transparent	New Order-Single
6205	ForceOnlyRTH	Int	1=ForceOnlyRTH is ON	New Order Single
6215	LegLocateReqd	Boolean	Same as 114 – Used for combination orders Valid codes = "N" or "Y." Required for multi-leg short sale orders involving U.S. equity securities ("stocks"). If customer uses IB as its executing broker but uses a clearing broker other than IB (a "Non-Cleared Customer") and Tag 624 contains the value "5" and Tag 6086 contains the value "1" or "2", this Tag 6215 must contain the value "N". IB will not accept a short sale order if a Non-Cleared Customer enters the value Y in Tag 6215. If customer uses IB as both its executing broker and clearing broker (a "Cleared Customer"), then such Cleared Customer is not required to populate this field. However, a Cleared Customer does have the option to populate this Tag 6215 only with the value "Y" (not the value "N"). If a Cleared Customer wishes to populate Tag 6216, the value must = IBKR (IB's MPID).	New Order - Multileg

Tag #	Tag Name	Data Type	IB Implementation	Used In
6216	LegLocateBroker	String	<p>Same as 5700 – Used for combination orders</p> <p>Tag 6216 (a four letter clearing broker or custodian MPID) is required for multi-leg short sale orders involving U.S. stocks to indicate the present location of the shares that are to be delivered in connection with customer's short sale order.</p> <p>Customers who use IB as their executing broker only, must enter a valid Market Participant Identifier ("MPID") for the clearing broker or other custodian with whom the customer has arranged to borrow the shares that are to be delivered in connection with customer's short sale order.</p> <p>A list of MPID's is located at: http://www.interactivebrokers.com/MPIDlist. If you do not see a valid MPID for your clearing broker or custodian, you must send an e-mail to: proserve@interactivebrokers.com. (Note: This field will be automatically populated with the MPID "IBKR" for those customers who use IB as both their executing broker and clearing broker).</p> <p>*If more than one MPID needs to be included, you can list more than one using a comma (,) as a delimiter.</p>	New Order – Multileg
6248	SmartComboGuarantee	Integer	<p>Used with SMART routed combos to specify whether inter-exchange SMART combos are to be guaranteed or non-guaranteed.</p> <p>0 = Guaranteed 1 = Non-Guaranteed</p>	New Order - Multileg
6257	NoBarriers	Integer	Specifies the number of "barriers" used in the adjustable stop order type.	New Order Single
6258	BarrierPrice	Price	Specifies the trigger price for the barrier. (required if 6257 >0)	New Order Single
6259	BarrierStopPrice	Price	Specifies the new stop price once the barrier is reached.	New Order Single
6260	BarrierTrailingAmt	Price	Specifies the new trailing amount once the barrier is reached	New Order Single
6261	BarrierPriceDelimiter	String	<p>Specifies the order type when the barrier is reached.</p> <p>Valid Values: 3 = Stop 4 = Stop Limit T = Trailing Stop TSL = Trailing Stop Limit</p>	New Order Single
6262	BarrierLimitPrice	Price	Specifies the new limit price once the barrier is reached.	New Order Single
6268	TrailingAmtUnit	String	<p>Specifies the trail method used:</p> <p>Valid Values: 6268=0 – Absolute offset used 6268=100 – Percentage offset used</p>	New Order – Single (trailing stop orders)
6269	BarrierTrailingAmtUnit	String	<p>Specifies the trail method used for Barrier orders:</p> <p>Valid Values: 6268=0 – Absolute offset used 6268=100 – Percentage offset used</p>	New Order – Single (trailing stop orders)

Tag #	Tag Name	Data Type	IB Implementation	Used In
6273	PipExchanges	String	If provided, this tag contains a comma-separated list of exchanges where the order is participating in the PIP process as a liquidity-providing (LP) orders. This field must be used by market makers on BOX to comply with the BOX rule that states that each entity can only send one order at one price for any particular PIP auction. IB may either send this field on original order acknowledgement, or may send it on subsequent unsolicited order status messages if this order becomes a LP order for PIP. IB will then later send an unsolicited order status if and when this order is no longer participating in the PIP. IB won't send anything if the order becomes fully filled due to and during the PIP.	Execution reports – Acks & unsolicited order status
6275	ContinuousUpdate	String	Used in IB Volatility Orders 1=Use initial volatility calculation only 2=Continuously update the price as volatility calculation changes 3=Price for main order specified by client	New Order (IB Volatility Orders)
6279	UnderlyingRefPrice	String	Used in IB Volatility Orders 1=midpoint 2=bid or ask	New Order (IB Volatility Orders)
6280	IsDeltaHedge	String	Used in IB Volatility Orders	New Order (IB Volatility Orders)
6281	XcrossC1OrdID	String	ISE Facilitation Order Firm side for C1OrdID (firm equivalent to tag 11)	New Order – Single (ISE FOK only)
6282	XCrossClearingFirm	String	ISE Facilitation Order Firm's ClearingFirm (firm equivalent to tag 439)	New Order – Single (ISE FOK only)
6283	XCrossClearingAccount	String	ISE Facilitation Order Firm's ClearingAccount (firm equivalent to tag 440)	New Order – Single (ISE FOK only)
6284	XCrossOpenClose	String	ISE Facilitation Order Firm's OpenClose (firm equivalent to tag 77)	New Order – Single (ISE FOK only)
6285	XCrossOptionAcct	String	ISE Facilitation Order Firm's OptionAcct (firm equivalent to tag6122)	New Order – Single (ISE FOK only)
6286	FacilitationPercentage		ISE Facilitation Order Desired percentage	New Order – Single (ISE FOK only)
6287	NotHeld	Boolean	Required with a value of "1" on all new orders (35=D) for stock quoting customers Valid Values: (0 = false , 1 = true)	New Order – Single
6290	HedgingType	String	Used in IB Volatility Orders Valid Values: -1=No Hedging 1=MKT Hedging 2=Limit Order Hedge E=Relative Order Hedge	New Order (IB Volatility Orders)
6370	TrailLimitOffset	Number	Used in trailing stop limit orders to specify the offset of the limit price. Can be positive, negative, or zero	New Order - Single
6436	tDeactivateOnClose	Integer	Used in IB Algo Orders to deactivate an order at the close of the current trading day. 1=deactivate the order at the end fo the day. 0=do not deactivate at the end of the day. (defaults to 0 if omitted)	New Order (IB Algo Orders)
6458	DividendSchedule	String	Used in IB Volatility Orders Valid Format: Yyyymmdd/value,yyymmdd/value etc.	New Order (IB Volatility Orders)
6459	InterestSchedule	String	Used in IB Volatility Orders Valid Format: Yyyymmdd/value,yyymmdd/value etc.	New Order (IB Volatility Orders)
6460	IsDeltaHedge	String	Used in IB Volatility Orders Valid Values: 1=Hedging Order Anything else or omitted=NOT hedging order	New Order (IB Volatility Orders)
6467	VolatCapPercentage	Percentage	Used in IB Volatility Orders Percentage in decimal form	New Order (IB Volatility Orders)
6468	VolatCapTicks	String	Used in IB Volatility Orders Price tick offset in decimal form	New Order (IB Volatility Orders)

Tag #	Tag Name	Data Type	IB Implementation	Used In
6559	ConsiderExecCost	Integer	Only available for clients with unbundled commissions 1 = Highest Rebate 2 = Primary Exchange 3 = Highest Volume Exchange with Rebate 4 = Highest Volume Exchange with Lowest Fee	New Order Single
6568	ExchangeExecID	String	Execution ID as reported by order execution venue.	Execution Reports
6579	CondSubmitCancel	String	Specifies if the order should be submitted or canceled if the condition is met 0 = Submit 1 = Cancel	New Order - Single
6580	StockRefPrice	String	Stock reference price for pegged to stock orders. (i.e. Option order Price = auxPrice + (NBBO - stockRefPrice) * delta)	New Order - Single
6596	GTCExpireTime	Date/time	Used to identify the date/time that GTC order will expire within IB system. Format: yyyyymmdd-hh:mm:ss	Execution Reports
6636	ProfessionalCustomer	Integer	Allows routing firms to designate an order as being routed by a "professional customer" as determined by the order routing firm. IB will pass this designation on to destination option exchange. 1 = True 0 (or omission) = False	New Order - Single
6680	LegClearingFirm	String	Per-Leg clearing for combo orders. Order should contain blank values for all legs except stock legs	New Order - Multileg
9816	ImpVolatility	String	Used in IB Volatility Orders Volatility in decimal form (decimal percentage)	New Order (IB Volatility Orders)
