

# **Introduction to Technical Analysis**

Andrew Wilkinson

## Risk Disclosure

Futures are not suitable for all investors. The amount you may lose may be greater than your initial investment. Before trading futures, please read the CFTC Risk Disclosure. For a copy, call (203) 618-5800.

Any strategies discussed, including examples using actual securities and price data, are strictly for illustrative and educational purposes only and are not to be construed as an endorsement, recommendation or solicitation to buy or sell securities or commodities. Past performance is not a guarantee of future results.

Interactive Brokers LLC is a member of [NYSE](#), [FINRA](#), [SIPC](#).

# Technical versus Fundamental

Technical

Analysis of internals

- Price
- Volume
- Pattern
- Support
- Resistance
- Recognition

Fundamental

Analysis of externals

- Economy
- Management
- SWOT
  - Strengths
  - Weakness
  - Opportunities
  - Threats
- Buy/ Sell recommendation

## Technical versus Fundamental

- Fundamental analysis leads to price predictions using valuation ratios
- Technical analysis uses trend and pattern recognition to predict prices

## What's in a Chart?

- Charts show the price performance of an underlying asset or security
- Get overview with at least a 6 month picture
- Consider your timeframe carefully
- Charts express prices as lines, bars or candlesticks

# Chart Types

- ❑ Trader Work Station (TWS) displays prices as a:
  - Line
    - Joins closing prices between each specified timeframe
  - Bar
    - Uses an open/high/low/close convention
  - Candlestick
    - More weight attached to session direction
  - Volume and Open Interest
    - Analyst pays attention to the volume associated with move within a given session

## What's the Aim?

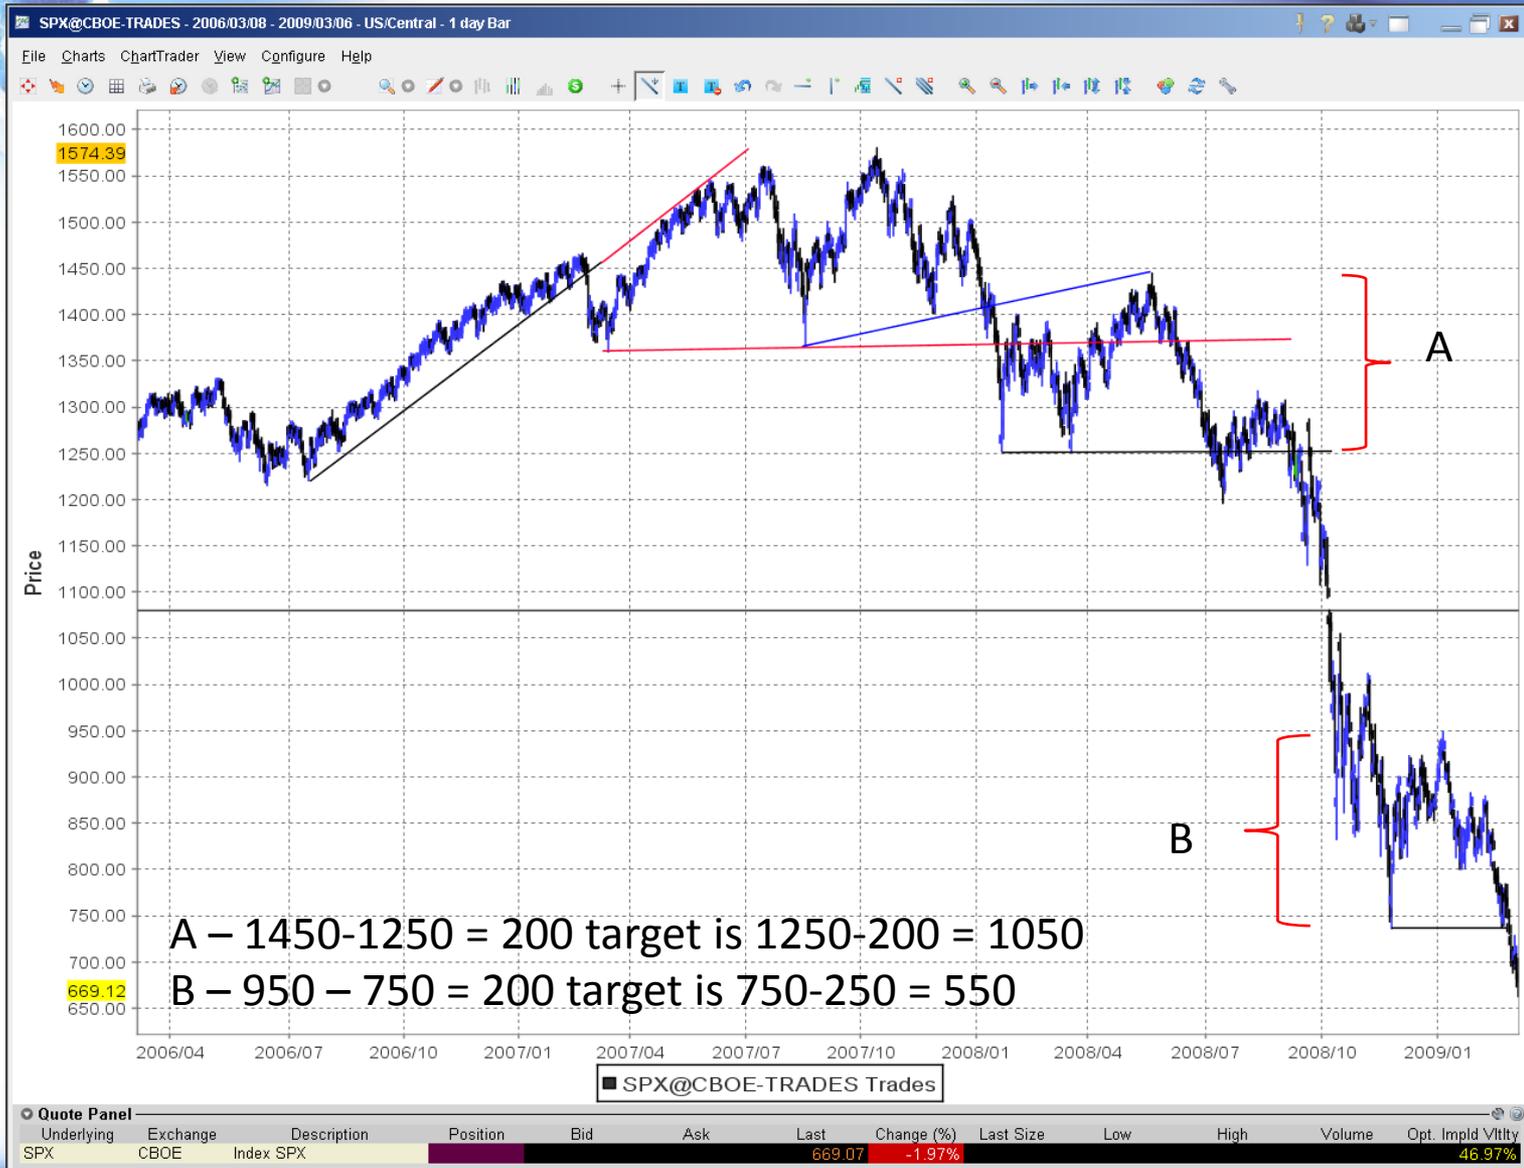

- Define the big picture trend – if there is one
- Compare health of underlying to a benchmark
- Search for shorter-term opportunities
- Understand the likelihood of immediate up or down movement
- Define range
- Establish entry or exit points
- Determine warning signs of a breach of trend or a pattern reversal

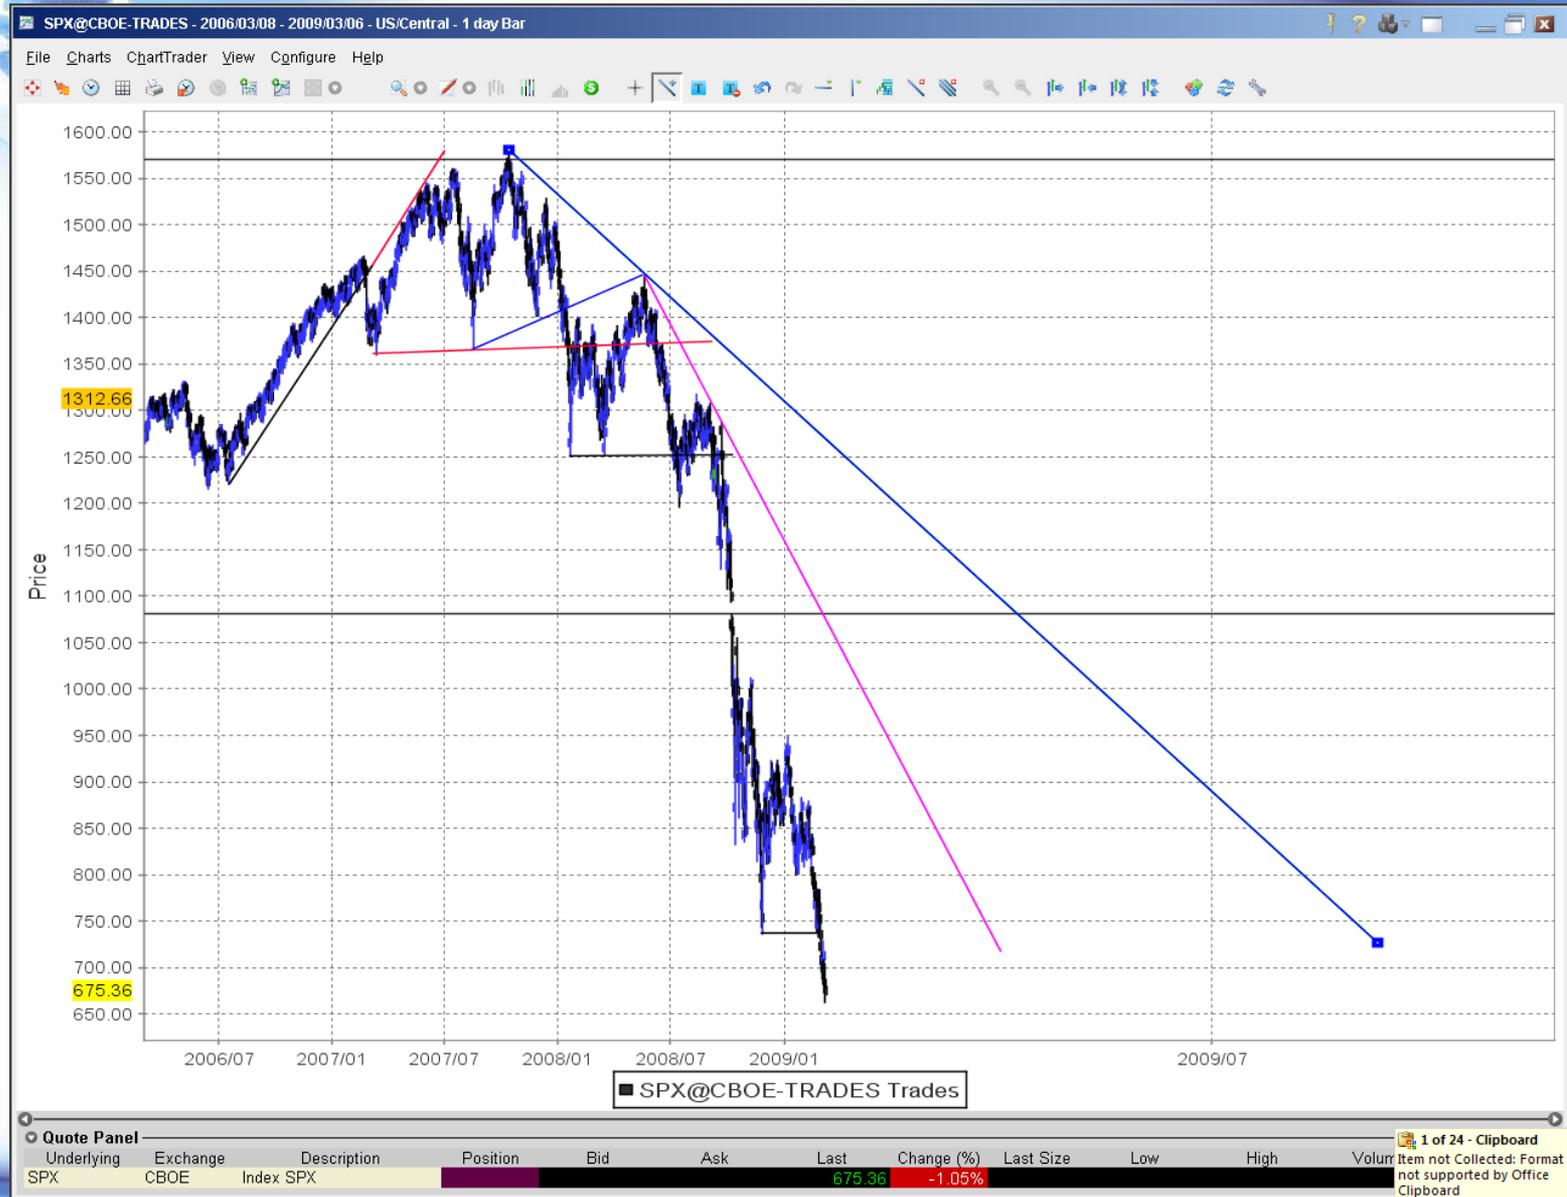

## Trendlines

- Straight line joining two or more price points
- Support line depicts upward trend
- Resistance depicts an area above current price that investors may find hard to breach
- Both can be horizontal lines
- Investors may eyeball the trend

# Trendlines

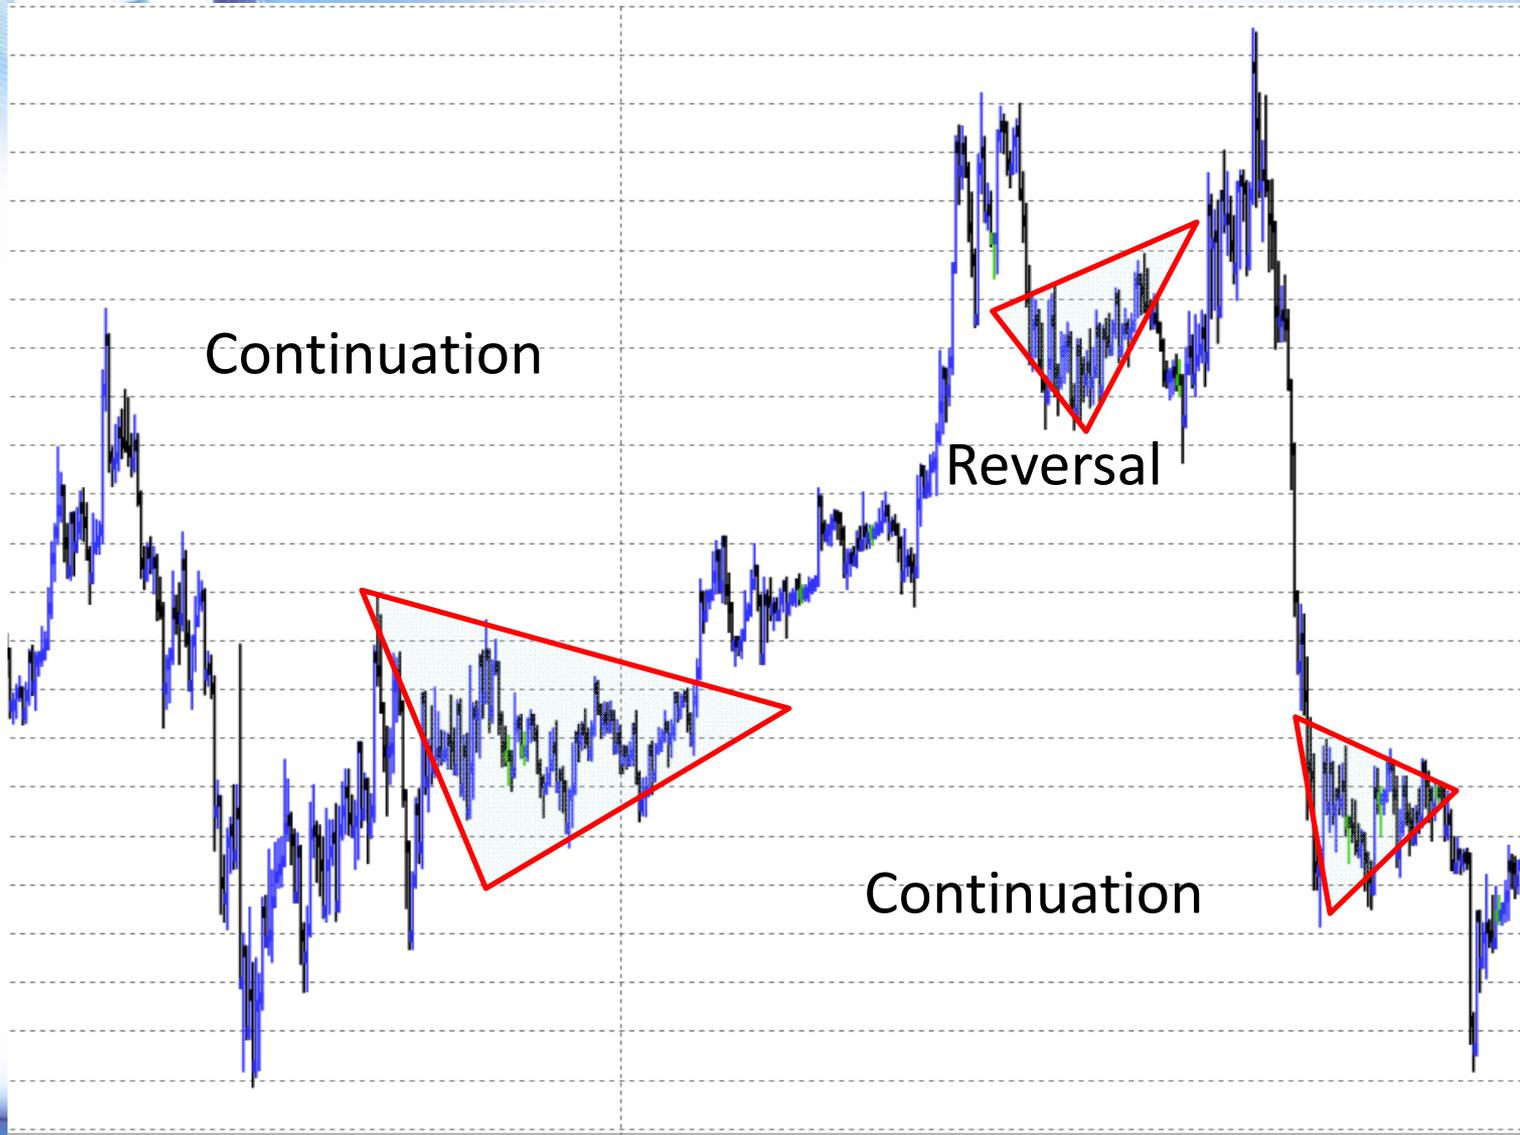

# S&P 500 index - overhead resistance

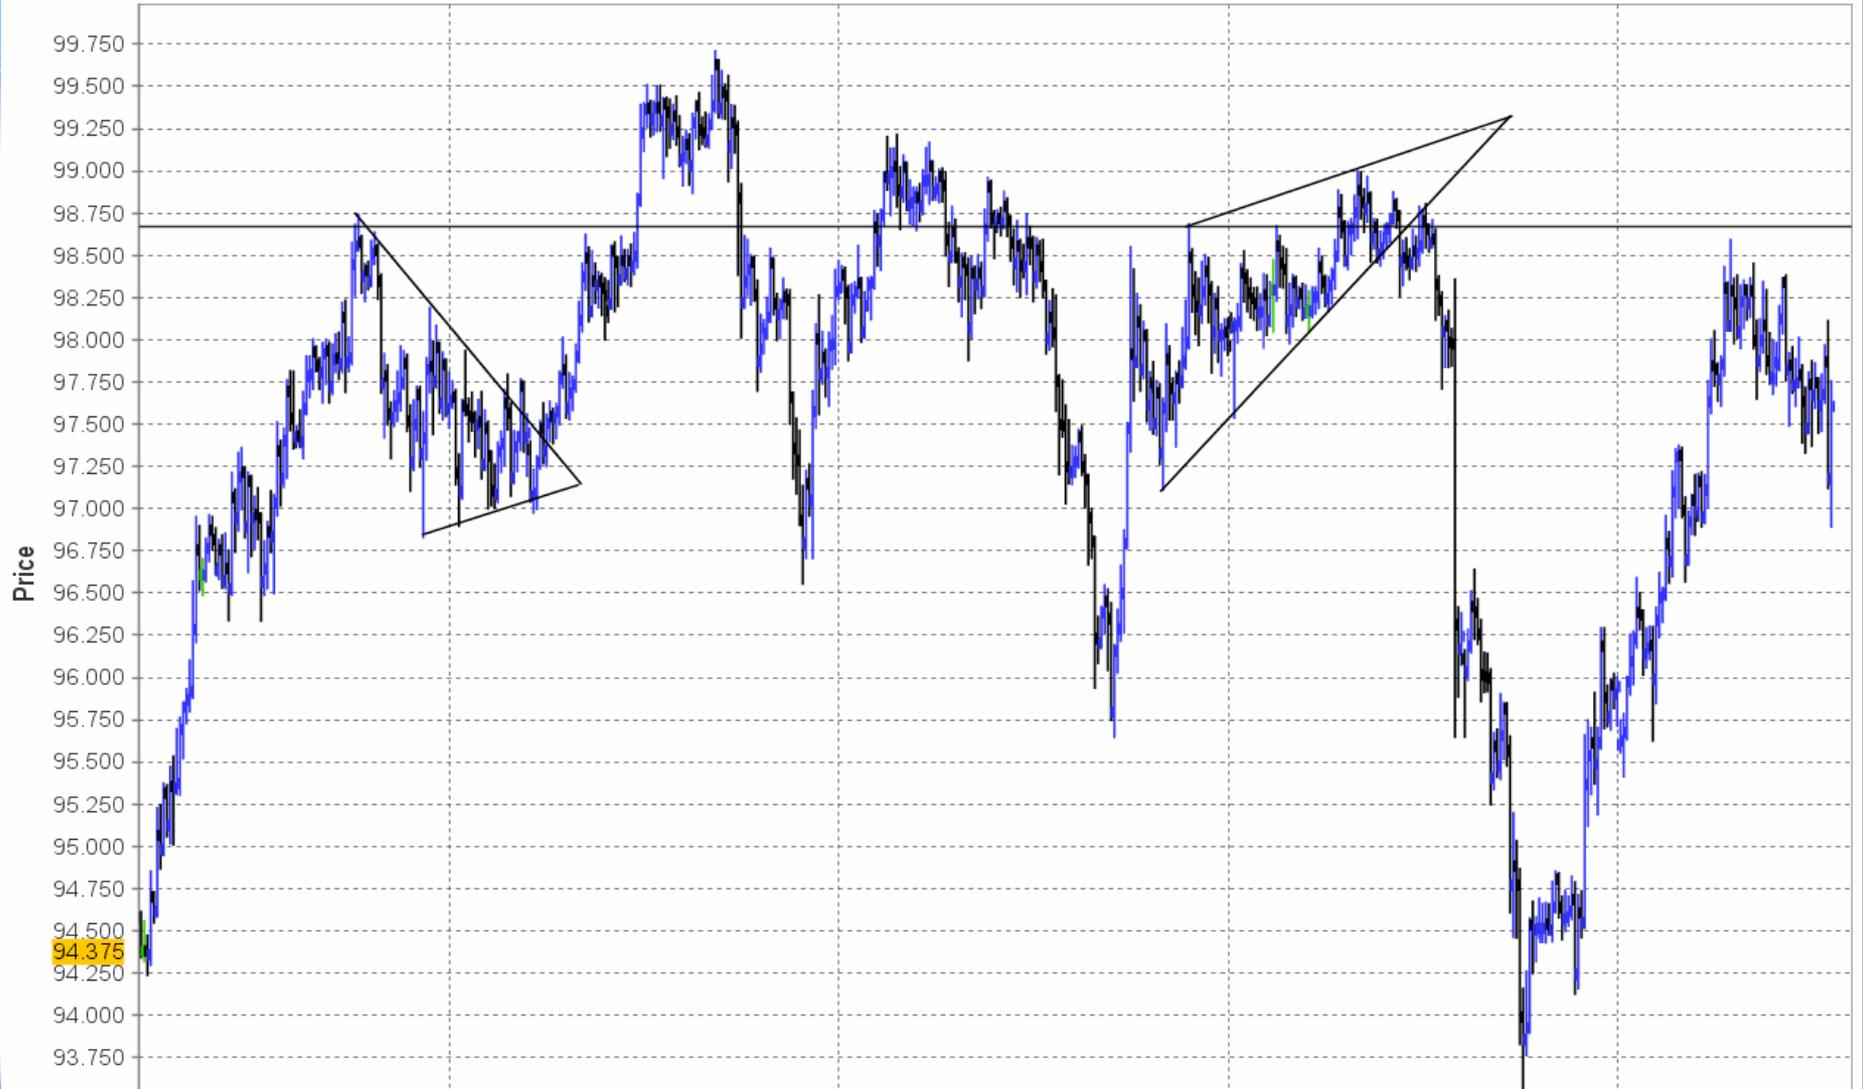

# Chart Patterns

- ❑ Trendlines show prevailing up or down trend
- ❑ Parallel lines depict 'trading channel'
- ❑ Patterns emerge
  - Continuation
  - Reversal
    - Triangle
    - Head & shoulders
    - Wedge
    - Pennant & flags

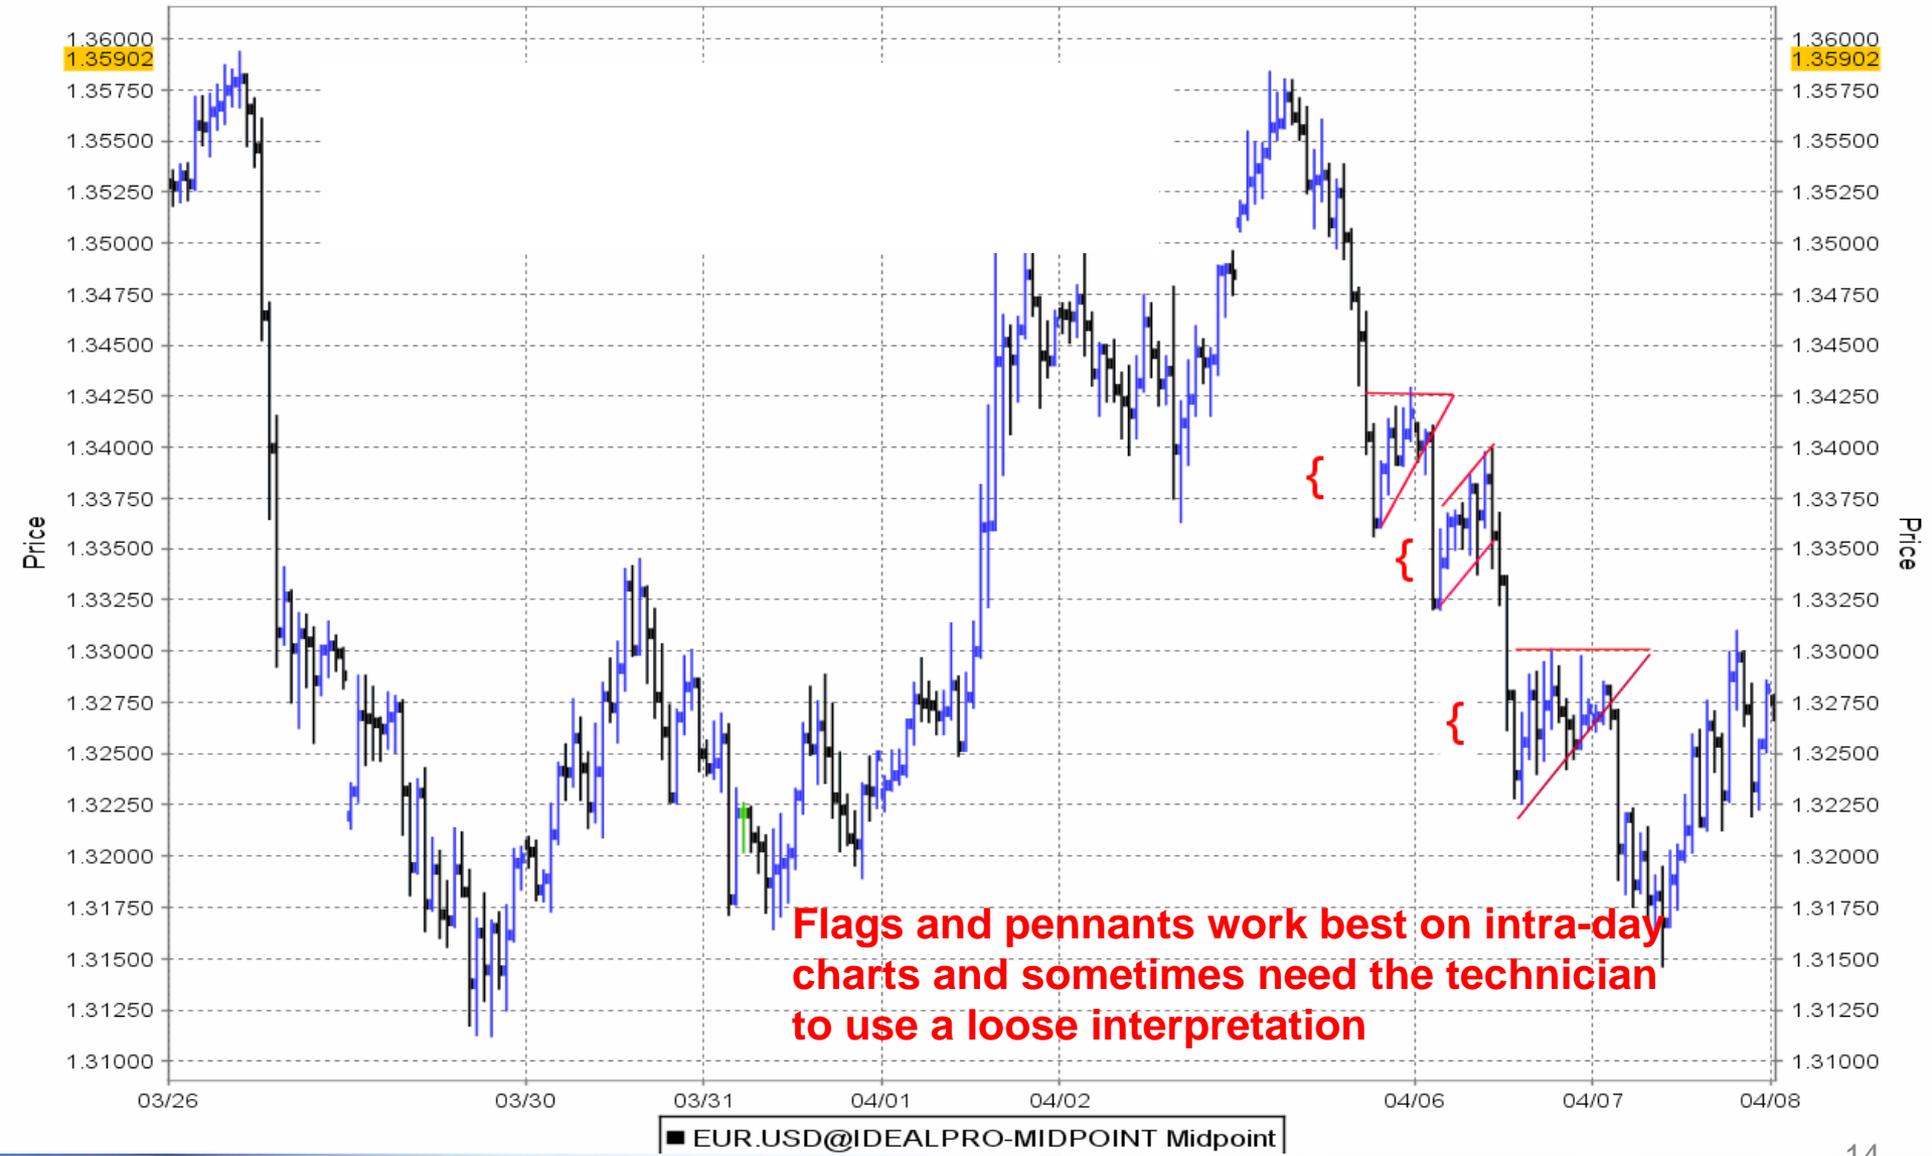

# Wedge

USD.JPY@IDEALPRO-MIDPOINT - 02/23 - 03/25 10:47:02 - US/Eastern - 1 hour Bar

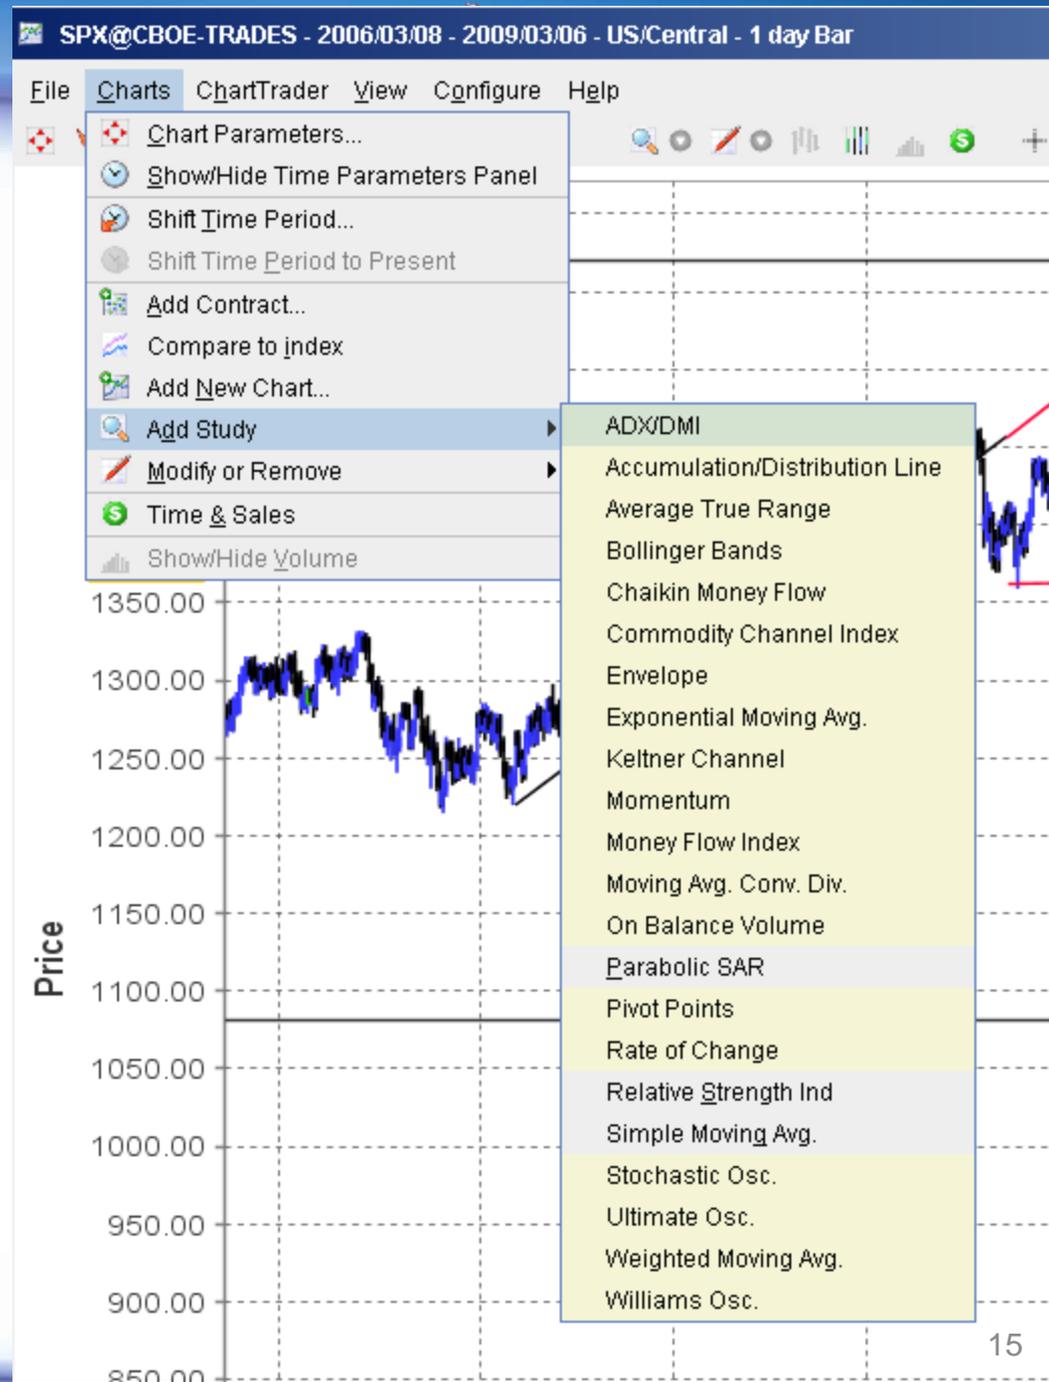

# Pennants and Flags

Quote Panel												
Underlying	Exchange	Description	Position	Bid	Ask	Last	Change	Last Size	Low	High	Volume	Opt. Impld Vltty
EUR	IDEALPRO	EUR.USD Forex		1.32625	1.32645	C1.32615	+0.00020					

# Studies

- ❑ TWS has a variety of commonly used technical indicators
- ❑ Within a chart, select “Charts” and “Add Study”
- ❑ For brief description of any study, use the search box on the IB website

## Moving Averages

- One of the simplest forms of analysis
- Compares average price for  $x$  days against a shorter period of  $y$  days
- Buy when more sensitive shorter moving average rises faster than longer period
- Sell when shorter moving average falls faster than longer period
- Different securities, indices and instruments require different length of data (one size does not fit all)
- Common periods are 5, 9, 21, 50, 90 and 200

Underlying	Exchange	Description	Position	Bid	Ask	Last	Change	Last Size	Low	High	Volume	Opt. Impld V
JPM	SMART	Stock (NYSE)		27.81	27.82	27.82	-1.46	1	27.72	28.90	42.986M	88.1

■ JPM@SMART-TRADES Trades 
 ■ SMA(9) JPM@SMART-TRADES Trades 
 ■ SMA(21) JPM@SMART-TRADES Trades

## ADX/DMI

- Strength of trend indicator
- Uses two filters (DMI+ and DMI-)
- The net of these two values is smoothed to create Average Directional Index
- This index rises to confirm trending prices
- ADX returns values 0-100
- Optimal performance when ADX is between 20-40

Underlying	Exchange	Description	Position	Bid	Ask	Last	Change	Last Size	Low	High	Volume	Opt. Impld Vlitf
AA	SMART	Stock (NYSE)		8.01	8.03	8.03	+0.24	5	7.50	8.16	74.984M	85.37%

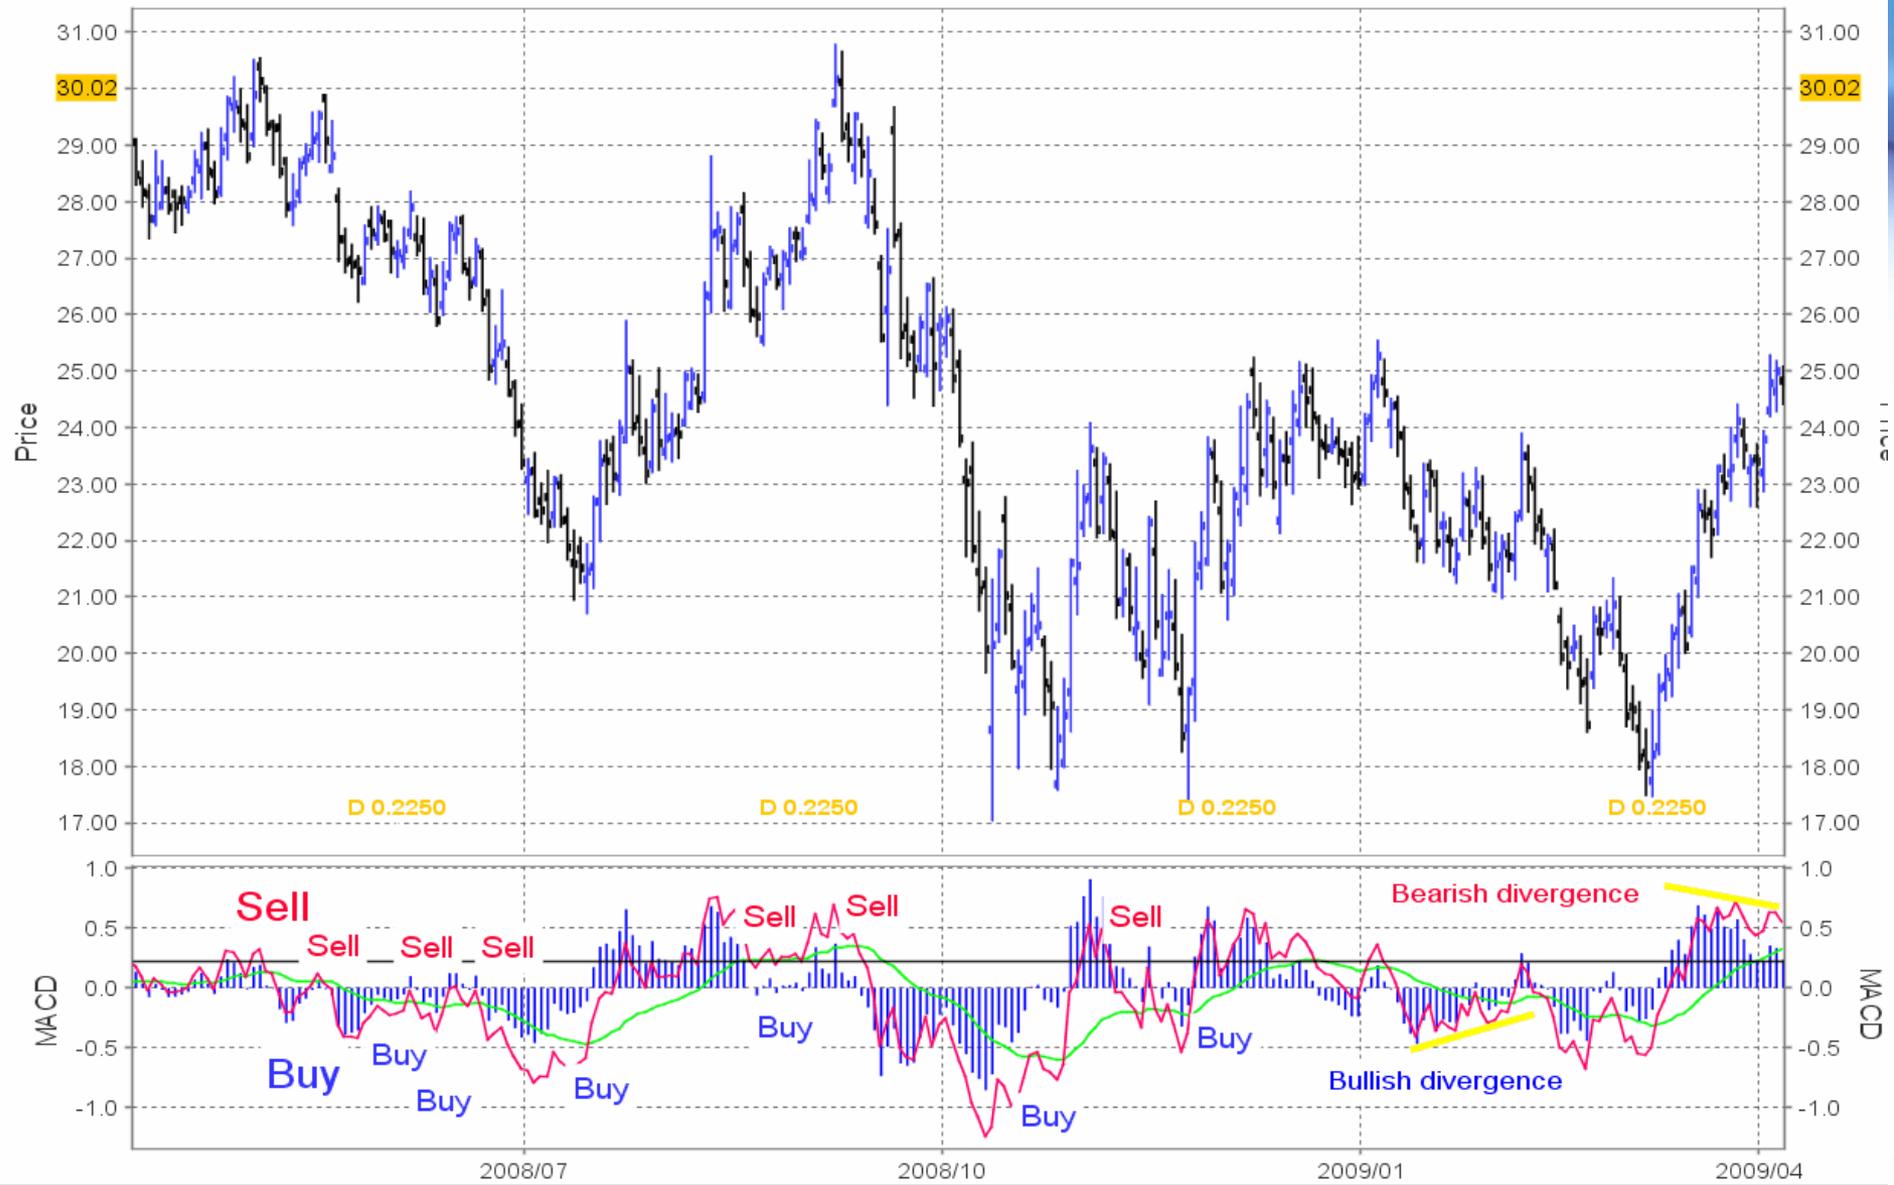

■ AA@SMART-TRADES Trades 
 ■ DI+(9) AA@SMART-TRADES Trades 
 ■ DI-(9) AA@SMART-TRADES Trades 
 ■ ADX(9) AA@SMART-TRADES Trades

## MACD

- Moving Average Convergence Divergence
- Employs exponential moving averages
- Subtracts longer moving average from shorter moving average to create MACD
- Uses an even shorter exponential moving average to create 'signal line'
- MACD passing up and down through signal line generates buy and sell signals
- MACD minus signal also creates histogram – also a reliable technical indicator

Underlying	Exchange	Description	Position	Bid	Ask	Last	Change	Last Size	Low	High	Volume	Opt. Impld V
HD	SMART	Stock (NYSE)		24.76	24.77	24.76	-0.24	2	24.46	25.03	14.919M	46.1

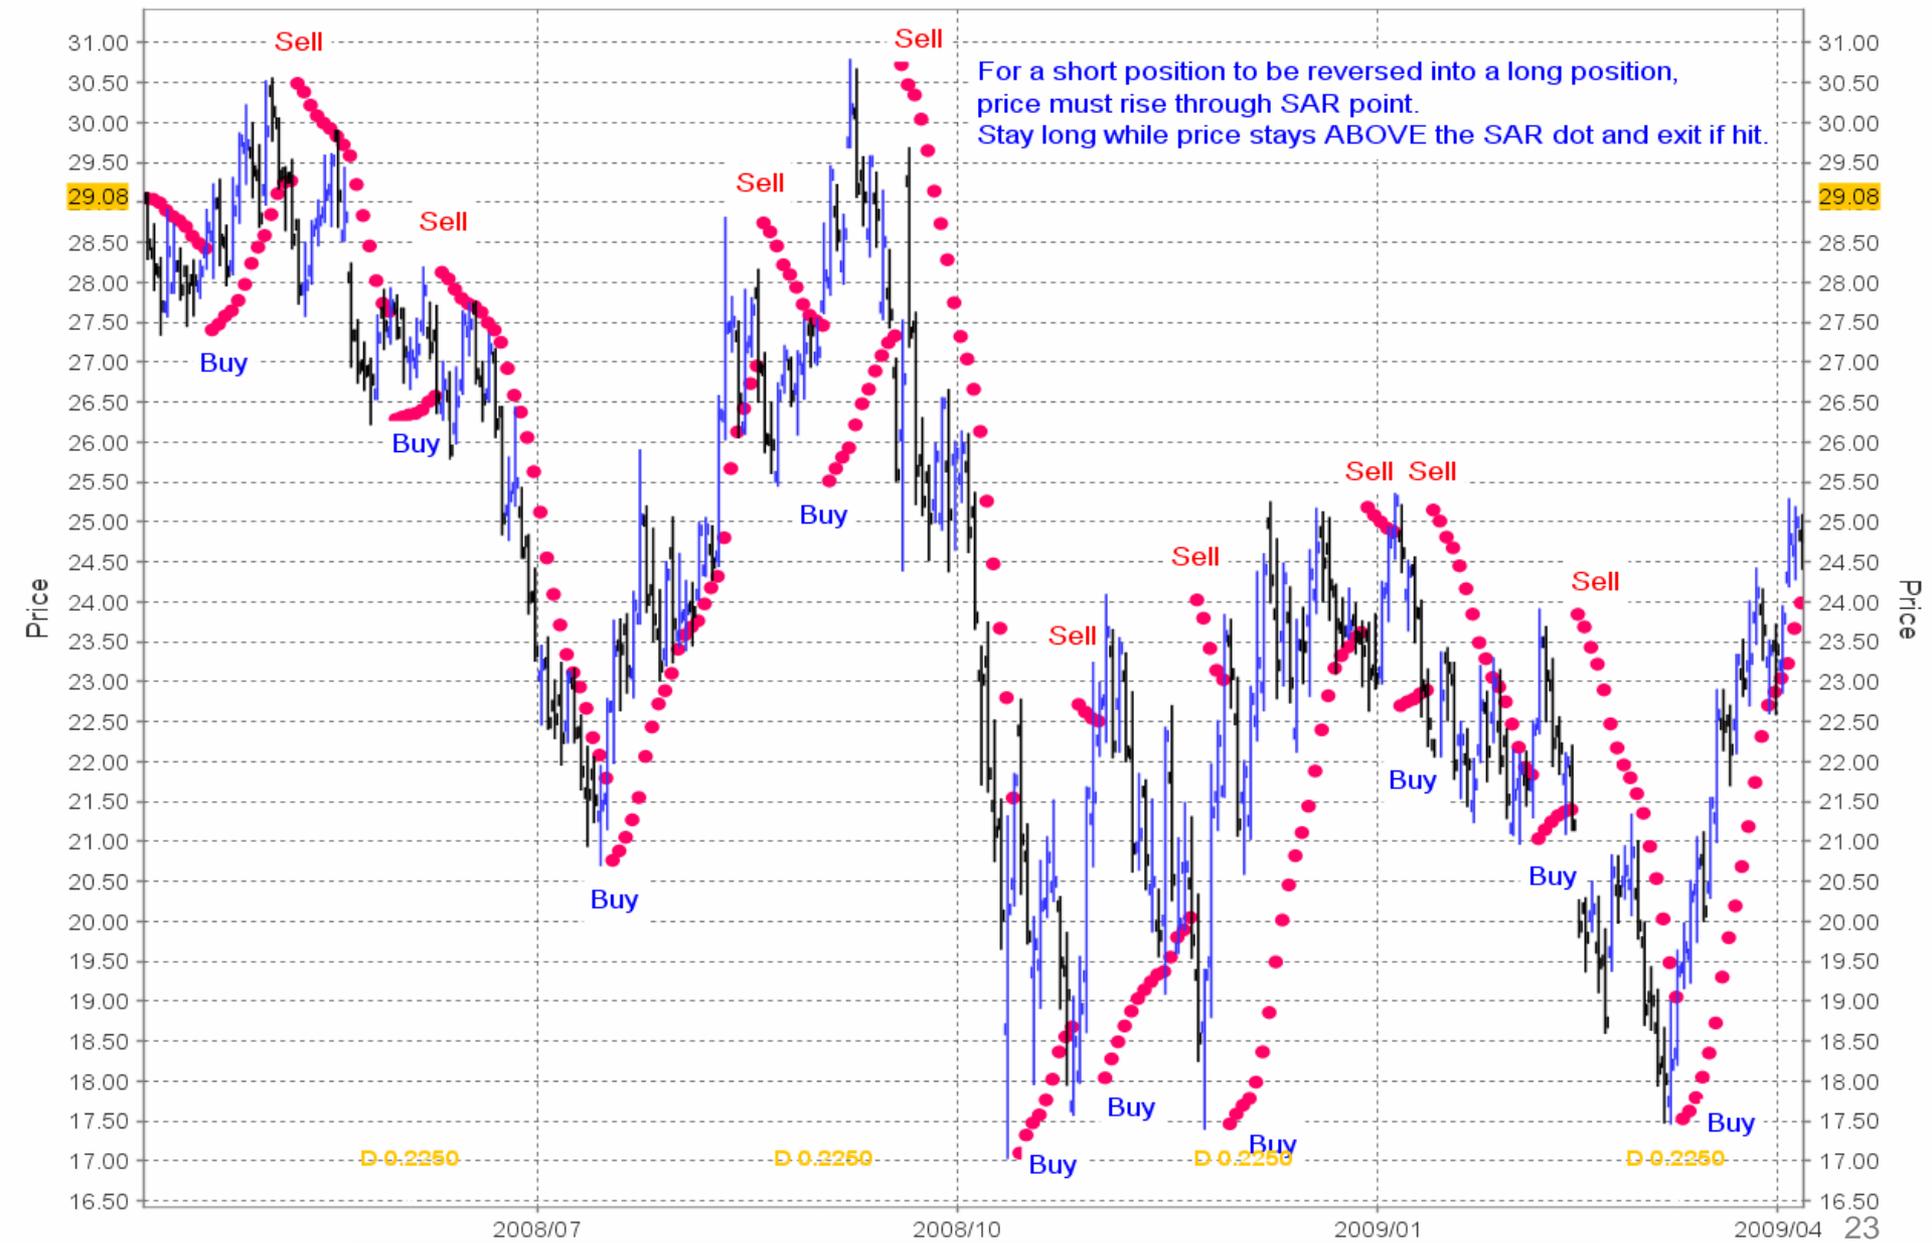

■ HD@SMART-MIDPOINT Midpoint ■ MACD(9, 12, 26 - EMA, EMA) HD@SMART Trades ■ SIGNAL(9, 12, 26 - EMA, EMA) HD@SMART Trades  
 ■ OSMA(9, 12, 26 - EMA, EMA) HD@SMART Trades

## Parabolic SAR

- Stop and Reverse
- May depict the current “trend”
- Initially established as a point at which prevailing position should be closed
- Rising dots below price are long exits
- Falling dots above price are short exits

Underlying	Exchange	Description	Position	Bid	Ask	Last	Change	Last Size	Low	High	Volume	Opt. Impd Vltty
HD	SMART	Stock (NYSE)		24.85	24.86	24.86	-0.14	1	24.46	25.03	15.668M	45.91%

For a short position to be reversed into a long position, price must rise through SAR point. Stay long while price stays ABOVE the SAR dot and exit if hit.

■ HD@SMART-MIDPOINT Midpoint ■ SAR(0.02, 0.2, 0.02) HD@SMART-MIDPOINT Midpoint

## Pivot Points

- TWS creates two resistance points above price
- Two support prices below price
- Both use previous days high, low and closing prices
- Pivot point is calculated using a five-point system
- Some traders use these to cluster buy and sell orders for day trading
- Need to know when either is giving way

Underlying	Exchange	Description	Position	Bid	Ask	Last	Change	Last Size	Low	High	Volume	Opt. Impld Vlit
HD	SMART	Stock (NYSE)		24.71	25.02	24.85	-0.15	7	24.46	25.03	16.993M	45.78%

06/02/08 (09:30:00-16:00:00) US/Eastern  
**HD@SMART-MIDPOINT Midpoint**  
 High: 27.610  
 Low: 26.805  
 Open: 27.610  
 Close: 27.130  
 Time Avg: 27.115  
**Pivot point HD@SMART-MIDPOINT Midpoint (R2)**  
 Value: 27.92  
**Pivot point HD@SMART-MIDPOINT Midpoint (R1)**  
 Value: 27.645

- Pivot point HD@SMART-MIDPOINT Midpoint (S2)

## Relative Strength Indicator (RSI)

- ❑ Looks at a set of user-defined data and compares number of up bars versus down bars to create an index
- ❑ Indicator oscillates between 0-100 and confirms market strength
  - Overbought readings range between 80-100
  - Oversold readings range 0-20
- ❑ Warning: Some of the best moves occur in these ranges!
- ❑ Useful for finding divergence between price and RSI to show false moves

Underlying	Exchange	Description	Position	Bid	Ask	Last	Change	Last Size	Low	High	Volume	Opt. Impl Vlit
HD	SMART	Stock (NYSE)		24.71	24.91	24.85	-0.15	7	24.46	25.03	16.993M	45.78%

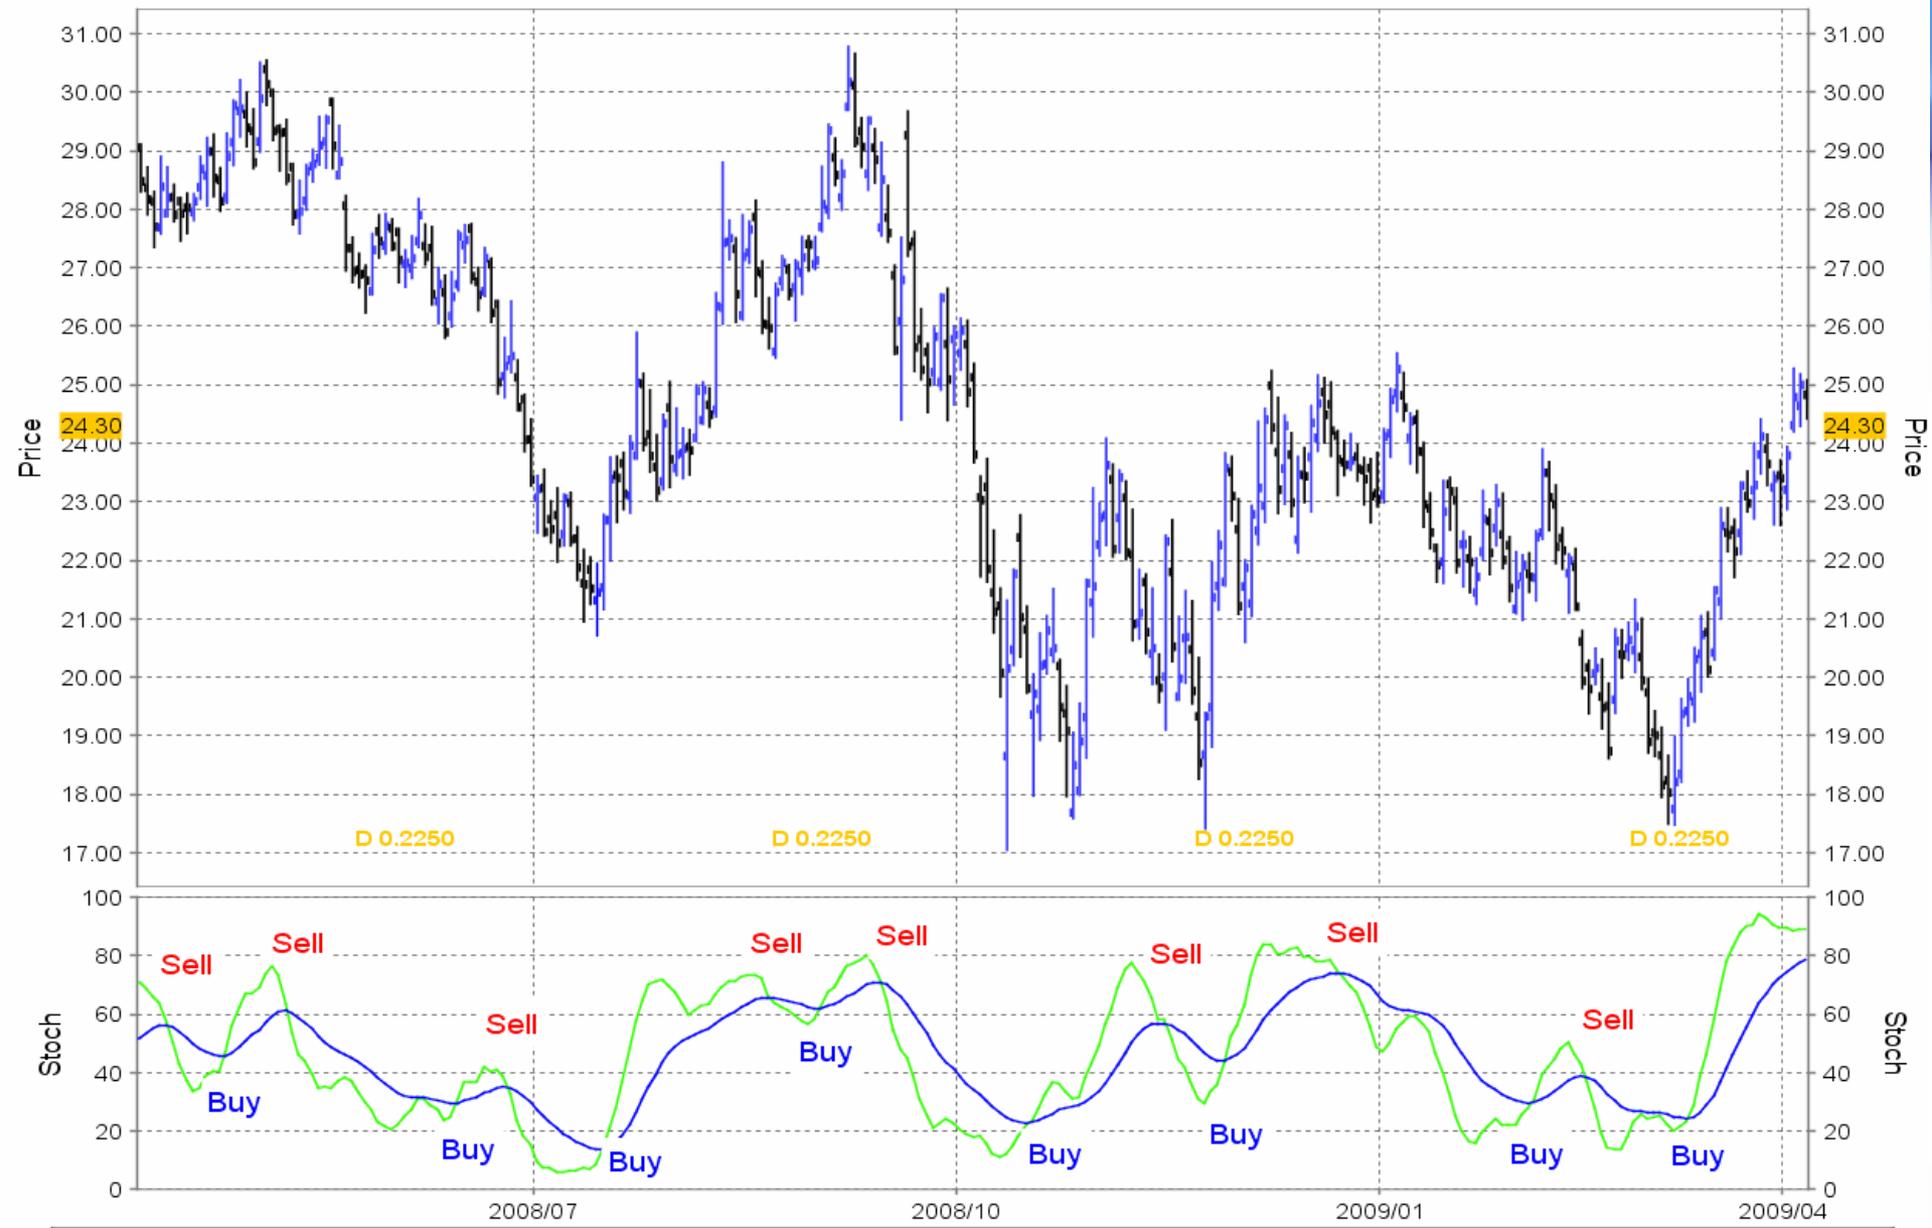

## Stochastic Oscillator

- Creates two lines - %k and %d
- %k - looks at most recent closing price and compares to the lowest reading from a specified range and divides by overall period range
- %d – moving average of %k
- Buy and sell indications occur when %k crosses %d
- Again useful for confirmation of price action at lows (highs)

## On Balance Volume

- Volume is a key component to trend development
- Creates a single line below the chart to show cumulative volume allowing for price direction
- Daily volume is ADDED when price closes up
- Volume total is SUBTRACTED when prices fall
- Use to gauge whether higher volume is supporting up or down trend
- Drawback is price settlement

Underlying	Exchange	Description	Position	Bid	Ask	Last	Change	Last Size	Low	High	Volume	Opt. Impld V/ltt
AA	SMART	Stock (NYSE)		8.03	8.04	8.03	+0.24	2	7.50	8.16	74.983M	85.37%

Alcoa's share price fell from \$45 to \$5.00.

All the way down, OBV broadly declined - but look at the recent surge in buying interest as shares have rebounded

■ AA@SMART-TRADES Trades ■ OBV AA@SMART-TRADES Trades

## Accumulate/Distribution

- Enhanced version of OBV
- Doesn't consider daily price change
- Focus on location of close relative to range of closes before adding or subtracting day's volume total
- AD line should follow prices
  - Cumulative buying should see line rise
  - Selling en masse should see line decline
- Looking for divergence between declining prices and accumulation of volume

Underlying	Exchange	Description	Position	Bid	Ask	Last	Change	Last Size	Low	High	Volume	Opt. Implied Volatility
AA	SMART	Stock (NYSE)		8.03	8.04	8.03	+0.24	2	7.50	8.16	74.983M	85.37%

■ AA@SMART-TRADES Trades ■ OBV AA@SMART-TRADES Trades ■ A/D Line AA@SMART-TRADES Trades

## Fibonacci Numbers

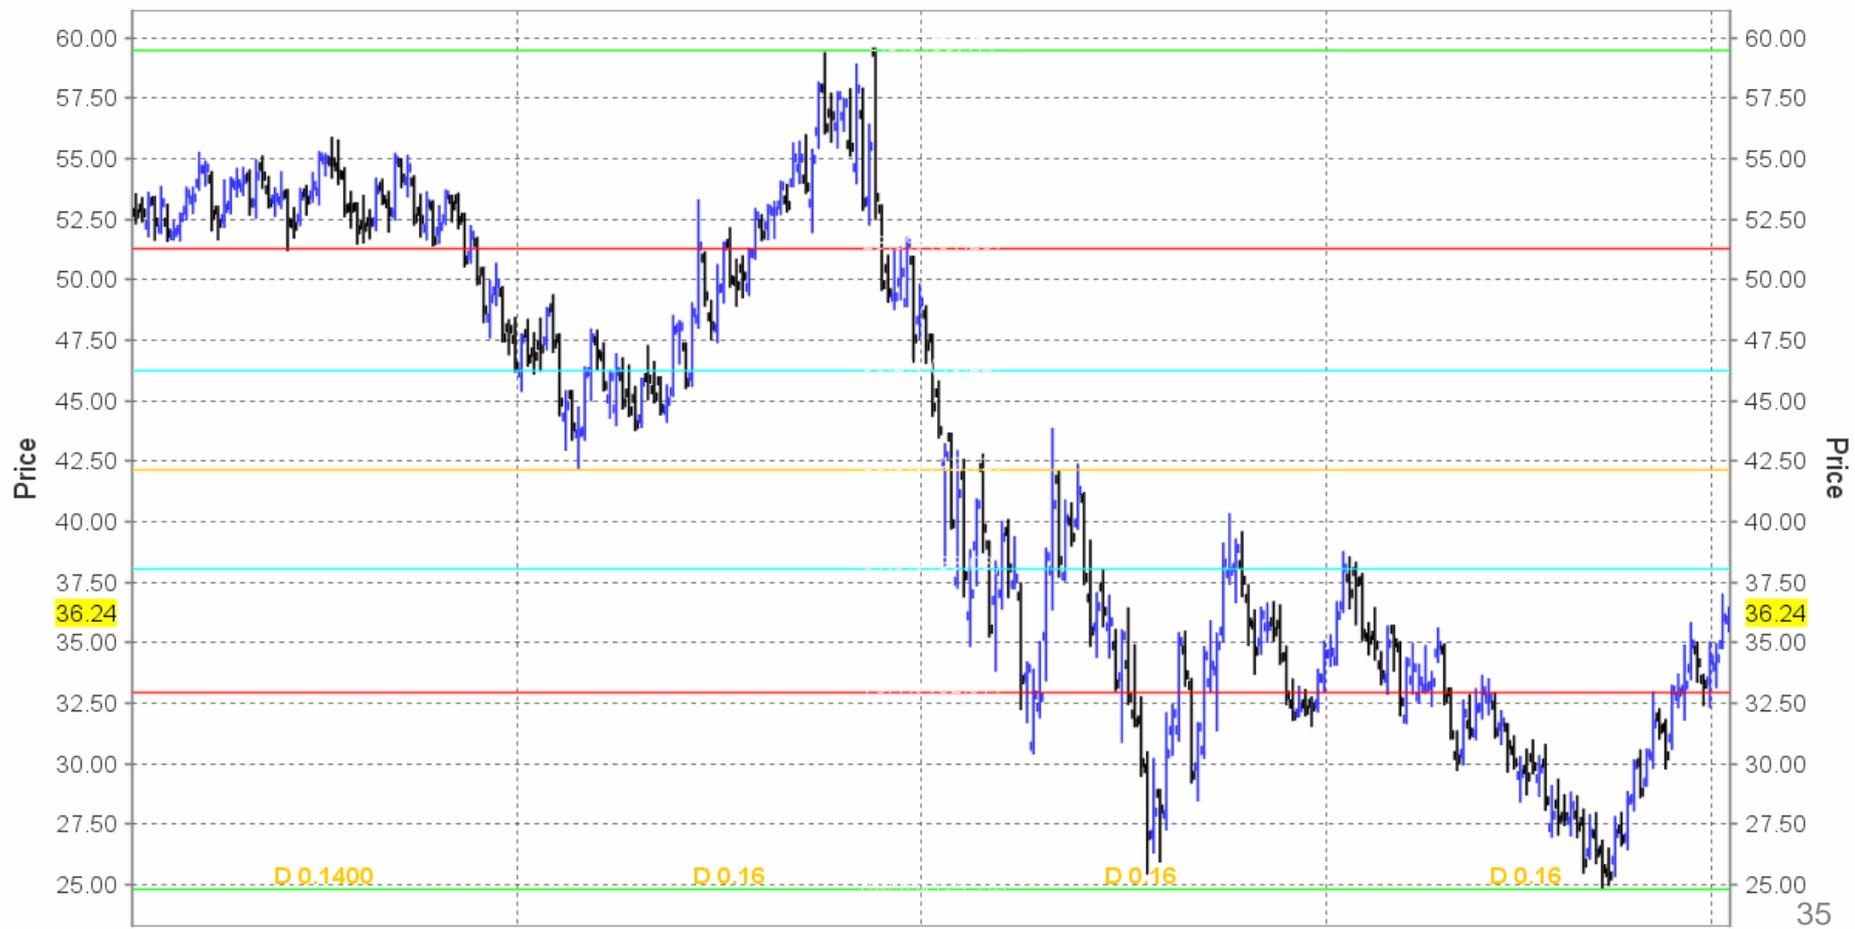

- Series of mathematical relationships
- Technician believes that history will repeat itself
- Prices move in predictable waves after a move has been established
- Key retracement points:
  - 23.6%
  - 38.2%
  - 50%
  - 61.8%
  - 76.4%

## Conclusion

- Technical analysis is the study of prices
- Chartist identifies patterns to make predictions
- Patterns can be numerically evaluated and give rise to numerous studies
- Valuable work, but you must be prepared to apply various studies to different asset classes and time frames
